The healing power of kindness

A new scientific literature review shows that delivering health care with kindness and compassion leads to faster healing, reduced pain, and shorter hospital stays. The review was sponsored by Dignity Health and conducted by Stanford University’s Center for Compassion and Altruism Research and Education.

Kindness is...

Purposeful, voluntary action undertaken with sensitivity to the needs or desires of another person and actively directed toward fostering their well-being or flourishing.

How kindness affects patients

When a physician is a good communicator, patients are MORE THAN TWICE AS LIKELY to listen to their doctor.7

When surgical patients are encouraged by their anesthesiologists during the immediate postoperative period, they HEAL FASTER AND ARE DISCHARGED FROM THE HOSPITAL SOONER because they require 50% less narcotics.3

A person who experienced empathy in a medical consultation had a 16% REDUCTION IN OVERALL COLD SEVERITY.5

Patients who experience compassionate care are more likely to divulge important information to their clinicians MAKING DIAGNOSIS MORE ACCURATE.6

The more compassionate care patients received, the LOWER THEIR DIASTOLIC BLOOD PRESSURE became during periods of stress.4

When patients receive compassionate care at the emergency room, they are LESS LIKELY TO RETURN TO THE EMERGENCY ROOM for the same medical issue.6

Organizations with a culture of compassion and kindness have:

+ reduced employee exhaustion and absenteeism
+ increased psychological engagement in work
+ greater employee well-being and commitment
+ higher levels of positive emotion for caregivers

How kindness affects caregivers and health care organizations

A kinder work environment benefits caregivers as well, who are likely to feel:

+ more engaged
+ less exhausted
+ have more satisfied patients

By keeping kindness at the core of their health care practice, caregivers:

+ have increased resilience to stress
+ inspire more meaningful work
+ are more immune to burnout

Organizations with a culture of compassion and kindness have:

+ reduced employee exhaustion and absenteeism
+ increased psychological engagement in work
+ greater employee well-being and commitment
+ higher levels of positive emotion for caregivers

The statistical significance of kindness-oriented care on improved health outcomes is LARGER THAN THE EFFECT OF ASPIRIN ON REDUCING A HEART ATTACK, OR SMOKING CESSATION ON MALE MORTALITY.7
