Clinical Trials

The University of Arizona is unique in that it is the only designated Comprehensive Cancer Center by the National Cancer Institute headquartered in Arizona. Conducting clinical trials is a requirement of this designation and fulfills an important part of the Cancer Center’s mission – to prevent and cure cancer.

Currently, the Cancer Center offers Phase I, Phase II, and Phase III clinical trials covering cancer prevention and the following tumor types:
- Ovarian
- Endometrial
- Cervical
- Bladder
- Head and neck
- Lung
- Breast
- Hepatocellular carcinoma
- Advanced solid tumor cancers

In 2017, the Cancer Center will be opening new clinical trials covering the following tumor types:
- Breast
- Cervical
- Endometrial
- Ovarian
- Lung
- Malignant bowel obstruction
- Head and Neck, including nasopharyngeal and salivary gland
- Pancreatic cancer
- Peritoneal
- Precision medicine
- Prostate
- Renal cell carcinoma
- Urothelial
- Skin, including cutaneous squamous cell, as well as basal cell

Additional clinical trials will continue to be identified and opened for patients with many different kinds of cancers, including Phase 0 and Phase I clinical trials, new immunotherapy options, and exciting opportunities for precision medicine and tumor profiling.
