

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	CALIFORNIA HOSPITAL MEDICAL CENTER - LOS ANGELES
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106190125
Report Period:	1/1/2024 - 12/31/2024
Status:	Submitted
Due Date:	09/30/2025
Last Updated:	09/30/2025
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://shorturl.at/AssVB

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

84407

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	54441	84407	64.5
Spanish Language	29434	84407	34.9
Asian Pacific Islander Languages	307	84407	0.4
Middle Eastern Languages	41	84407	0
American Sign Language	suppressed	84407	suppressed
Other Languages	suppressed	84407	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:
<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health

information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

7825

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

9950

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

34

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	1216	15.5	0	
Housing Instability	610	7.8	0	
Transportation Problems	1436	18.4	0	
Utility Difficulties	619	7.9	0	
Interpersonal Safety	302	3.9	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

530

Total number of respondents to HCAHPS Question 19

595

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

89.1

Total number of people surveyed on HCAHPS Question 19

7438

Response rate, or the percentage of people who responded to HCAHPS Question 19

8

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language

Not disclosed					

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

488

Total number of respondents to HCAHPS Question 17

595

Percentage of respondents who responded "yes" to HCAHPS Question 17

82

Total number of people surveyed on HCAHPS Question 17

7438

Response rate, or the percentage of people who responded to HCAHPS Question 17

8

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:
<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

16

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

295

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

54.2

Table 5. Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of in-hospital deaths that meet the inclusion/exclusion criteria	Number of hospital discharges that meet the inclusion/exclusion criteria	Rate of in-hospital deaths per 1,000 hospital discharges that meet the inclusion/exclusion criteria (%)

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

Number of NTSV patients with Cesarean deliveries

142

Total number of nulliparous NTSV patients

479

Rate of NTSV patients with Cesarean deliveries

0.296

Table 7. Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of NTSV patients with cesarean deliveries	Total number of NTSV patients	Rate of NTSV patients with Cesarean deliveries (%)

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

1078

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

7969

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

13.5

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	7.6	4.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	7.6	3.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	7.6	3.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	7.9	2.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	7.9	1.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	7.9	1.8

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Asian	10.7	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth			Female	9.8	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth			Female	11.8	1.3

Plan to address disparities identified in the data

In April 2025, California Hospital Medical Center achieved the Joint Commission Excellent Health Outcomes for All Certification. The top 10 disparities identified were all related to all-cause unplanned 30-day readmission hospital rates across payor types, sex, race/ethnicity, and age. We determined that the majority of our initiatives impact ongoing social and physical health for these groups and thereby impact readmissions.

Some of these initiatives include: Frequent Utilizer System Engagement (FUSE), Social Workers' assessment, California Bridge Program which addresses substance abuse, mental health counselling through Hope Street Margolis Family Center, FOCUS (Frontlines of Communities in the United States) through Gilead Sciences to support patients with HIV and Hepatitis C, as well as local partnerships with community-based organizations (i.e., churches, food distribution center, People Assisting the Homeless [PATH], Homeless Outreach Program Integrated Care System (HOPICS), community health improvement grant, Replate, Para Su Salud), partnerships with recuperative care, California Community Foundation's Care coordinated Initiative. Our care coordination teams facilitate many of these efforts for inpatients and emergency department patients. Moreover, we are compliant with Senate Bill 1152 to ensure needs for transportation, weather appropriate clothing, provision of a meal, and medications are offered to those experiencing homelessness. Interpreter services are provided to communicate using the patient's preferred language. New employee orientation and annual education is provided to all staff for health equity , workplace violence, and implicit bias competencies.

Population impact: Chronically homeless who are high utilizers of the emergency department.

Actions planned: Utilize FUSE program to address the health disparities for those who are chronically homeless and who are high utilizers of the emergency department by coordinating with John Wesley County Hospital (primary care) and Housing Works (to find permanent housing).
Measurable objectives: Reducing the number of annual emergency visits and measuring the number of participants.
Timeframe: Annual

Population impact: Emergency patients with substance abuse
Actions planned: Partnership with CA Bridge program who helps in training caregivers to identify and support patients of substance abuse. They also bring supportive tools and referrals to connect patients to services.
Measurable objectives: Number of referrals and trainings
Timeframe: Annual

Population impact: Pediatric mental health
Actions planned: Ongoing mental health services provided to our pediatric population (and their families) through Hope Street Margolis Family Center
Measurable objectives: Number of services provided
Timeframe: Annual

Population impact: HIV and Hepatitis C community members
Actions planned: Partnership with the FOCUS program, which is a Gilead Sciences public health initiative that partners with community organizations and hospitals to provide HIV and Hepatitis C (HCV) testing and facilitate linkage to care.
Measurable objectives: Number of tests provided, education offered, and referrals given.
Timeframe: Annual

Population impact: Addressing those who experience food insecurity.
Actions planned: Partnership with Replate by donating our cafeteria/kitchen food daily to Replate who then coordinates with food distribution centers.
Measurable objectives: Donating daily 100% of food that can be used by Replate
Timeframe: Monthly

Population impact: Those who have challenges navigating health care insurance, particularly with Medi-Cal.
Actions planned: Para Su Salud is a program that helps increase access to health care for low-income, uninsured families living in the hospital service area, especially for those whose first language is Spanish.
Measurable objectives: 75% enrollment of client applications that are referred
Timeframe: Annual

Population impact: Caregiver/Employee health equity competencies
Actions planned: Annual education for all caregivers to learn about health equity , implicit bias, and Diversity, Equity, Inclusion and Belonging.
Measurable objectives: All caregivers will receive and complete the training.
Timeframe: Annual

Population impact: Patients whose first language is NOT English
Actions planned: Utilization of interpreter services, whether by an in-person interpreter or use of a virtual interpreter and to document the use of interpreter services.

Measurable objectives: Patients whose primary language is other than English will have documentation of the use of interpreter services.
Timeframe: Annual

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

California Hospital Medical Center (CHMC) demonstrates a commitment to person centered care through initiatives focused on patient safety, communication, and respect for individual preferences. Performance indicator: Compliance with Health Equity training for all employees.

Impact: This achievement ensures that staff are now equipped with the necessary skills to collect sensitive demographic data with cultural humility. This high level of completion provides the hospital with a more accurate and comprehensive understanding of our diverse patient population, which is essential for personalizing care, informing our equity efforts, and evaluating their effectiveness.

Patient safety

Performance indicator: Improved American Disability Act preferred language and interpretive service compliance for each clinical nursing department.

Impact: The achievement of this language compliance goal directly translates into enhanced patient safety. Clear communication, facilitated by preferred language services, is critical in preventing misunderstandings, medication errors, and misinterpretations of care instructions.

Addressing patient social drivers of health

These disparities disproportionately affect vulnerable populations, specifically patients aged 35 and older, individuals covered by Medicare and Medicaid, Black or African American individuals, White individuals, and male patients. In alignment with our commitment to equitable healthcare and improved patient outcomes, we have implemented a multi-faceted approach to address these readmission disparities, focusing on proactive social determinant of health (SDoH) screening, advanced risk assessment, patient-centered interventions, and robust care coordination.

The hospital screens our patients for the following social needs: transportation, clothing assistance, Rx medication, insurance, substance abuse disorders, enhanced care management, interpretation and translation assistance, housing assistance, Employment Development Department (EDD)/ Social security disability insurance assistance, food connections, appointment with medical providers and other resources. When appropriate, the hospital can assist the patients who have these needs by making referrals to community benefit organizations, which provide vital services to patients in the community who have specific needs. A screening tool for social determinants of health has been integrated into our electronic health record (EHR) system to screen all adult inpatients for needs related to food insecurity, housing and utilities needs, transportation needs, and interpersonal violence concerns.

In 2024, Dignity California Hospital Medical Center had 9950 qualifying encounters, with 7825 (78.6%) of these resulting in completed SDOH screenings with a screen-positive rate of approximately one-third of all completed screens (34%).

Among the domains screened, transportation needs were the most frequently identified, present in 18.4% of screenings. Food insecurity was identified in 15.5% of cases. Utilities difficulties were identified at 7.9%. Housing instability was identified at 7.8% and interpersonal safety concerns were identified in 3.9% of screenings.

Care Coordination, Social Work, and Community Health work collaboratively to identify and support patients who are experiencing any social determinant of health. Some of the ways Dignity California Hospital Medical Center supports patients includes provision of weather appropriate clothing, food, connections to community resources (i.e. shelters, interim housing, food distribution centers, etc.), transportation, mental health services, medication, referrals to clinics, and specialized care (i.e. substance abuse support, trafficking support, etc.).

Dignity California Hospital Medical Center has fostered partnerships with community-based organizations, such as John Wesley County Hospital (JWCH), Housing Works, California Bridge Program which addresses substance abuse, Department of Mental Health (DMH), Department of Public Health (LACDPH), Southside Coalition, local churches, food distribution centers, People Assisting the Homeless (PATH), Homeless Outreach Program Integrated Care System (HOPICS), partnerships with recuperative care, and Maternal Child Health Access.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Dignity California Hospital Medical Center has identified disparities in guideline-coordinated stroke treatment. The disparities noted at our facility include race, ethnicity, and socioeconomic status. For instance, data often shows that certain minority populations may experience delays in hospital arrival, leading to ineligibility to receiving critical treatments like IV thrombolytic. It was identified that there are multiple causes to these disparities, such as health literacy, language barriers, cultural beliefs, socioeconomic barriers like insurance coverage and medication compliance such as inability to refill medications on time due to lack of transportation, financial issues and lack of insurance coverage.

Our hospital provides both written and verbal education that is provided in the patient's preferred language. This education includes recognizing signs of symptoms of stroke, stroke risk factors, ways to reduce the risk of another stroke, and how to activate emergency services. We are currently working on educating staff on assessing depression in our stroke population. Additionally, social worker services and case management services assist with addressing health-related social needs. Our hospital identified a subgroup variation in key stroke performance metrics. Our preliminary data shows disparities in Black Non-Hispanic stroke mortality rates. We are currently conducting a deeper dive into outcomes suspecting potential variations in treatment efficacy or complications across different demographic and socioeconomic subgroups.

Care coordination

Dignity California Hospital Medical Center partners with organizations such as Coalition to Abolish Slavery and Trafficking, Journey Out, FOCUS, and FUSE to effectively connect patients to appropriate resources. Once the patient is connected with any outside agencies our hospital engages with those agencies to be integrated discharge planning.

Access to care

Performance Indicator: Ongoing investment in FUSE to support our chronically unhoused patients to receive case management, primary care physician, behavioral health counseling services and housing (partnerships with JWCH and Housing Works).

Impact: Reduces gaps in care by connecting patients to consistent, coordinated care and supportive services. Addresses key drivers of poor health by linking patients to housing, mental health care, substance use treatment, and social services. Improves health outcomes by supporting patients with getting the right care at the right time. Strengthens cross-sector care coordination by facilitating strong connections between the hospital, community-based, and housing providers.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
