

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	COMMUNITY HOSPITAL OF SAN BERNARDINO
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106361323
Report Period:	1/1/2024 - 12/31/2024
Status:	Submitted
Due Date:	09/30/2025
Last Updated:	09/29/2025
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://www.dignityhealth.org/socal/locations/san-bernardino

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

73393

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	56710	73393	77.3
Spanish Language	16435	73393	22.4
Asian Pacific Islander Languages	143	73393	0.2
Middle Eastern Languages	22	73393	0
American Sign Language	suppressed	73393	suppressed
Other Languages	suppressed	73393	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health

information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

5095

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

6587

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

40

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	907	17.8	0	0
Housing Instability	743	14.6	0	0
Transportation Problems	933	18.3	0	0
Utility Difficulties	517	10.1	0	0
Interpersonal Safety	200	3.9	0	0

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

316

Total number of respondents to HCAHPS Question 19

351

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

90

Total number of people surveyed on HCAHPS Question 19

4388

Response rate, or the percentage of people who responded to HCAHPS Question 19

8

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

295

Total number of respondents to HCAHPS Question 17

351

Percentage of respondents who responded "yes" to HCAHPS Question 17

84

Total number of people surveyed on HCAHPS Question 17

4388

Response rate, or the percentage of people who responded to HCAHPS Question 17

8

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:
<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

109

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

265

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

588

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

4247

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

13.8

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	5.2	4.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	5.7	4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	5.2	3.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	5.2	2.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	10.5	2.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	10.5	2.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	5.7	2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	10.5	1.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth			Female	11	1.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth			Female	9.4	1.8

Plan to address disparities identified in the data

Disparity 1,3,4 Plan: Age-Related Readmission Disparities (65 and older, 50–64, and 35–49 vs. 18–34)

Population Impact: Adults 35-65 and older experiencing higher unplanned readmissions compared to younger patients.

Measurable Objectives: Reduce 30-day readmission rate ratio for ages 65 and older from 4.1 to 2.5, ages 50-64 from 3.5 to 2.5, and for ages 35-49 from 2.9 to 2.0 within 24 months.

Timeframe: Pilot Q4 2025, reassess Q4 2026.

Disparity 2,7 Plan: Payor Related Readmission Disparities (Medicare/Medicaid vs. Private)

Population Impact: Patients with Medicare/Medicaid show higher readmission rates compared to privately insured patients.

Measurable Objectives: Reduce Medicare readmission rate ratio from 4.0 to 2.0 and Medicaid from 2.0 to 1.0 within 24 months

Timeframe: Pilot in Q4 2025, reassess Q4 2026.

Disparity 5,6,8 Plan: Race and/or Ethnicity Related Readmission Disparities (Multiracial/White/Asian vs. Hispanic or Latino)

Population Impact: Multiracial, White, and Asian patients face higher readmission rates compared to the Hispanic or Latino population.

Measurable Objectives: Reduce Race and/or Ethnicity readmission rate ratio from 4.0 to 2.0 and Medicaid from 2.0 to 1.0 within 24 months.

Timeframe: Pilot in Q4 2025, reassess Q4 2026.

Disparity 9,10 Plan: Sex Assigned at Birth- Male Related Readmission Disparities

Population Impact: Male patients show higher readmission rates than females

Measurable Objectives: Reduce male readmission rate ratios from 1.8 for readmissions that include behavioral health diagnosis and 1.7 for those without a behavioral health diagnosis to a readmission rate ratio of 1.0 within 24 months.

Timeframe: Pilot in Q4 2025, reassess Q4 2026.

Actions Planned:

Strategies to reduce readmissions across all disparities include:

- Enhanced Discharge Planning: Standardize and individualize discharge plans to include clear instructions, medication reconciliation, and follow-up appointments.
- Post-Discharge Follow-up: Implement structured post-discharge phone calls within 2-3 days of discharge to address immediate concerns and confirm understanding of discharge instructions.
- Patient Education and Engagement: Broad health education, community outreach, and vital screening programs available to all community members.
- Chronic Diseases: Self-Management Education and outreach for asthma, cancer, diabetes, heart failure, plus tobacco cessation with distribution of educational materials and engagement of patients/caregivers in shared decision-making regarding their care.
- Community Partnerships: Collaborate with community organizations, primary care providers, and specialized services (e.g., home health, social services) to support patients post-discharge.
- Staff Training: Provide ongoing training to clinical and administrative staff on cultural competency, health literacy, effective communication, and patient-centered care.

By focusing on culturally tailored interventions, payer-based support, and age and gender-sensitive care strategies, Community Hospital of San Bernardino will reduce disparities in readmissions. These actions will advance equity, improve patient outcomes, and align with California Assembly Bill 1204.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Definition: Involving patients in decisions about their care, respecting their values, and addressing their concerns.

Performance Indicator: HCAHPS domains: Communication with Nurses/Doctors & Responsiveness of Staff.

Impact: These metrics ensure that our communication and responsiveness is focused on our patient, meaningful communication that reflects the patient's preferred language, values, and cultural beliefs, and meeting their requested needs. We support patient-centered care in the following ways:

- Leadership Rounding provides direct connection with patients and family to obtain input and resolve any concerns, connect to appropriate staff, physicians, and ancillary departments.
- Use of interpreter services when patients identify their preferred language is other than English. We have robust resources for Qualified Medical Interpreters: Interpreter services vendors for phone access and video access.

- Translation of Health Materials: Vital health education materials, consent forms, and discharge instructions are translated into Spanish, our community's primary language need, enabling diverse communities to understand essential information at their own pace. We plan to reassess our community's language needs and add additional languages as identified.

Patient safety

Performance Indicator: A key metric for assessing the effectiveness of patient safety initiatives is the reduction in pressure injuries. Specifically, significant improvements in rates of pressure injuries experienced by patients, particularly those 65 years and older serve as critical performance indicators. These indicators represent preventable complications that can lead to prolonged hospital stays, increased healthcare costs, and significant patient discomfort or injury. Tracking and analyzing these rates allows healthcare facilities to identify areas for improvement, implement targeted interventions, and monitor the impact of their safety programs.

Impact: The successful achievement of these performance indicators directly translates into enhanced patient safety, leading to a profound and positive impact on patient outcomes. When patient safety measures are effectively implemented, the risk of preventable harm is substantially reduced.

This, in turn, contributes to:

- Improved Patient Health: Patients are less likely to suffer from avoidable complications, leading to faster recovery times and better overall health outcomes.
- Reduced Morbidity and Mortality: By preventing errors and adverse events, patient safety initiatives contribute to a decrease in illness, injury, and, in severe cases, death.
- Enhanced Patient Experience: A safe environment fosters a sense of security and confidence, leading to a more positive and less stressful healthcare experience for patients and their families.
- Decreased Healthcare Costs: Preventing complications reduces the need for additional treatments, extended hospital stays, and readmissions, thereby lowering the financial burden on both patients and the healthcare system.
- Increased Trust and Reputation: Hospitals and healthcare providers that prioritize patient safety build a stronger reputation for quality care, fostering greater trust within the community.

Addressing patient social drivers of health

- Definition: Screening for and responding to factors like housing, food, income, and transportation.
- Performance Indicator: In 2024, we screened 5,095 patients for SDOH. Of those, 2,015 or 40% of patients were identified to have experienced unmet needs. Transportation and food insecurity were highest among our patient population.
- Impact: These disparities disproportionately affect vulnerable populations, specifically patients aged 35-65, individuals covered by Medicare and Medicaid, Black or African American individuals, and male patients. In alignment with our commitment to equitable healthcare and improved patient outcomes, we have implemented a multi-faceted approach to address these disparities, focusing on proactive social determinant of health (SDoH) screening, advanced risk assessment, patient-centered interventions, and robust care coordination.
- Goal: The initiative to address basic needs is anticipated to result in: improved coordination of homeless services; increasing access to services including successful completion of referrals to outpatient services; and creating a safe discharge for individuals without a permanent housing option.

- Community Collaboration: CHSB plans to continue to build upon many of previous years' initiatives and explore new partnership opportunities within the city and county of San Bernardino, including the different health plans and community organizations. Efforts to enhance services in partnership with local community entities, will continue with specific focus on improving the linkages to primary care, mental health services, transportation and food insecurity, social services and community resources.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

- Community Hospital of San Bernardino embraces a philosophy of continuous learning and improvement in our pursuit of patient safety equity. This means our strategies are adapting based on emerging data, evidence based research, and invaluable community feedback. Our transparent sharing of both successes and challenges underscores our accountability, fostering a highly reliable environment that is focused on equitable outcomes and ensuring every patient benefits from the absolute highest standards of safety and care.
- We have leveraged clinical decision support and technology in the form of a Clinical Scorecard support system that provides a Health Equity Ratio Comparative Performance Report for decisions and action plans to assist with bridging gaps in care. The report is designed to understand the measurable differences and quality outcomes. It provides an analysis of quality measures stratified by race, ethnicity, age, gender, and social vulnerability.

Care coordination

Our performance at Community Hospital of San Bernardino in the priority area of Care Coordination is a direct reflection of our mission: to provide high quality, compassionate care for all who seek it. We are profoundly committed to delivering equitable care to every patient, proactively recognizing and mitigating the impact of social determinants of health and systemic biases that often complicate care transitions.

Advancing Health Equity Through Focused Care Coordination: Our hospital is deeply committed to advancing health equity by systematically improving care coordination and directly addressing disparities in access, communication, and outcomes.

To reduce avoidable readmissions and significantly improve health outcomes, strategies we are implementing include:

- Identification of readmission risk - low, moderate, high/severe
- Completing specific interventions for each level of readmissions:
 - Low: F/U appt with PCP made prior to discharge, Referral to Heart Health/Nutrition at HEC, Meds to Beds, SUN referral.
 - Moderate: F/U appt with PCP made prior to discharge, Referral to Heart Health/Nutrition at HEC, F/U appt with specialist prior to discharge, Meds to Beds, SUN referral.
 - High: F/U appt with PCP made prior to discharge, Referral to Heart Health/Nutrition at HEC, F/U appt with specialist prior to discharge, Home Health Safety Eval, Meds to Beds, SUN Referral.
- Monthly audits of all 30-day readmissions to identify trends and modify our action plan accordingly, including aggregation of Social Determinants of Health.
- Readmission Reduction Committee planned restructure: Our hospital's Readmission Reduction Committee plan is to include our Health Equity Lead and Mission Services. This interdisciplinary approach aims to bridge gaps in patient needs by offering community resources, reviewing data to identify potential needs, and developing strategies to connect patients with appropriate support.

Access to care

- Definition: The ability of patients to obtain timely, culturally appropriate services.

At Community Hospital of San Bernardino, our commitment to Access to Care is fundamental to our mission: providing high quality, compassionate care and achieving genuine health equity for every patient.

- CHSB's 24/7 Emergency Department (ED) serves as the primary and most critical gateway to care for our community's emergency needs, ensuring access at all times. This foundational commitment is further enhanced by a multi-faceted approach that addresses every aspect of equitable access, from physical entry to culturally competent care, and informed community collaboration.
- Services to assist our community with timely and equitable access to care include:
 - Tele-Psychiatry - Psychiatrists are available via remote technology to provide early evaluation and psychiatric intervention for patients, improving access to timely quality care. Access is available to both the ED and inpatient setting.
 - Outpatient Behavioral Health
 - Health/wellness Education programs for the community.
 - Financial Assistance Programs: Crucial support for uninsured or underinsured patients: assisting those in need to obtain insurance coverage, preventing medical expenses from impeding care.
 - Essential Prescription Support: Direct medication delivery (Meds to Beds), addressing immediate medication needs at discharge to prevent readmissions or worsening conditions due to non-adherence.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
