

Hospital Equity Measures Report

General Information

| | |
|---|---|
| Report Type: | Hospital Equity Measures Report |
| Year: | 2024 |
| Hospital Name: | MERCY GENERAL HOSPITAL |
| Facility Type: | General Acute Care Hospital |
| Hospital HCAI ID: | 106340947 |
| Report Period: | 1/1/2024 - 12/31/2024 |
| Status: | Submitted |
| Due Date: | 09/30/2025 |
| Last Updated: | 02/03/2026 |
| Hospital Location with Clean Water and Air: | Y |
| Hospital Web Address for Equity Report: | https://tinyurl.com/4vkkuduz |

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

57355

Table 1. Summary of preferred languages reported by patients.

| Languages | Number of patients who report preferring language | Total number of patients | Percentage of total patients who report preferring language (%) |
|----------------------------------|---|--------------------------|---|
| English Language | 51017 | 57355 | 88.9 |
| Spanish Language | 2928 | 57355 | 5.1 |
| Asian Pacific Islander Languages | 1860 | 57355 | 3.2 |
| Middle Eastern Languages | 484 | 57355 | 0.8 |
| American Sign Language | 23 | 57355 | 0 |
| Other Languages | 931 | 57355 | 1.6 |

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

7850

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

10222

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

76.8

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

| Social Driver of Health | Number of positive screenings | Rate of positive screenings (%) | Number of positive screenings who received intervention | Rate of positive screenings who received intervention (%) |
|-------------------------|-------------------------------|---------------------------------|---|---|
| Food Insecurity | 599 | 7.6 | 0 | |
| Housing Instability | 325 | 4.1 | 0 | |
| Transportation Problems | 964 | 12.3 | 0 | |
| Utility Difficulties | 329 | 4.2 | 0 | |
| Interpersonal Safety | 241 | 3.1 | 0 | |

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:
<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

528

Total number of respondents to HCAHPS Question 19

556

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

95

Total number of people surveyed on HCAHPS Question 19

2648

Response rate, or the percentage of people who responded to HCAHPS Question 19

21

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

| Race and/or Ethnicity | Number of "probably yes" or "definitely yes" responses | Total number of responses | Percent of "probably yes" or "definitely yes" responses (%) | Total number of patients surveyed | Response rate of patients surveyed (%) |
|--|--|---------------------------|---|-----------------------------------|--|
| American Indian or Alaska Native | | | | | |
| Asian | | | | | |
| Black or African American | | | | | |
| Hispanic or Latino | | | | | |
| Middle Eastern or North African | | | | | |
| Multiracial and/or Multiethnic (two or more races) | | | | | |
| Native Hawaiian or Pacific Islander | | | | | |
| White | | | | | |

| Age | Number of "probably yes" or "definitely yes" responses | Total number of responses | Percent of "probably yes" or "definitely yes" responses (%) | Total number of patients surveyed | Response rate of patients surveyed (%) |
|------------------------|--|---------------------------|---|-----------------------------------|--|
| Age < 18 | | | | | |
| Age 18 to 34 | | | | | |
| Age 35 to 49 | | | | | |
| Age 50 to 64 | | | | | |
| Age 65 Years and Older | | | | | |

| Sex assigned at birth | Number of "probably yes" or "definitely yes" responses | Total number of responses | Percent of "probably yes" or "definitely yes" responses (%) | Total number of patients surveyed | Response rate of patients surveyed (%) |
|-----------------------|--|---------------------------|---|-----------------------------------|--|
| Female | | | | | |
| Male | | | | | |
| Unknown | | | | | |

| Payer Type | Number of "probably yes" or "definitely yes" responses | Total number of responses | Percent of "probably yes" or "definitely yes" responses (%) | Total number of patients surveyed | Response rate of patients surveyed (%) |
|------------|--|---------------------------|---|-----------------------------------|--|
| Medicare | | | | | |
| Medicaid | | | | | |
| Private | | | | | |
| Self-Pay | | | | | |
| Other | | | | | |

| Preferred Language | Number of "probably yes" or "definitely yes" responses | Total number of responses | Percent of "probably yes" or "definitely yes" responses (%) | Total number of patients surveyed | Response rate of patients surveyed (%) |
|----------------------------------|--|---------------------------|---|-----------------------------------|--|
| English Language | | | | | |
| Spanish Language | | | | | |
| Asian Pacific Islander Languages | | | | | |
| Middle Eastern Languages | | | | | |
| American Sign Language | | | | | |
| Other/Unknown Languages | | | | | |

| Disability Status | Number of "probably yes" or "definitely yes" responses | Total number of responses | Percent of "probably yes" or "definitely yes" responses (%) | Total number of patients surveyed | Response rate of patients surveyed (%) |
|--------------------------------------|--|---------------------------|---|-----------------------------------|--|
| Does not have a disability | | | | | |
| Has a mobility disability | | | | | |
| Has a cognition disability | | | | | |
| Has a hearing disability | | | | | |
| Has a vision disability | | | | | |
| Has a self-care disability | | | | | |
| Has an independent living disability | | | | | |

| Sexual Orientation | Number of "probably yes" or "definitely yes" responses | Total number of responses | Percent of "probably yes" or "definitely yes" responses (%) | Total number of patients surveyed | Response rate of patients surveyed (%) |
|----------------------------|--|---------------------------|---|-----------------------------------|--|
| Lesbian, gay or homosexual | | | | | |
| Straight or heterosexual | | | | | |
| Bisexual | | | | | |
| Something else | | | | | |
| Don't know | | | | | |
| Not disclosed | | | | | |

| Gender Identity | Number of "probably yes" or "definitely yes" responses | Total number of responses | Percent of "probably yes" or "definitely yes" responses (%) | Total number of patients surveyed | Response rate of patients surveyed (%) |
|---|--|---------------------------|---|-----------------------------------|--|
| Female | | | | | |
| Female-to-male (FTM)/transgender male/trans man | | | | | |
| Male | | | | | |
| Male-to-female (MTF)/transgender female/trans | | | | | |
| Non-conforming gender | | | | | |
| Additional gender category or other | | | | | |
| Not disclosed | | | | | |

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

484

Total number of respondents to HCAHPS Question 17

556

Percentage of respondents who responded "yes" to HCAHPS Question 17

87.1

Total number of people surveyed on HCAHPS Question 17

2648

Response rate, or the percentage of people who responded to HCAHPS Question 17

21

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

| Race and/or Ethnicity | Number of "yes" responses | Total number of responses | Percentage of "yes" responses (%) | Total number of patients surveyed | Response rate of patients surveyed (%) |
|--|---------------------------|---------------------------|-----------------------------------|-----------------------------------|--|
| American Indian or Alaska Native | | | | | |
| Asian | | | | | |
| Black or African American | | | | | |
| Hispanic or Latino | | | | | |
| Middle Eastern or North African | | | | | |
| Multiracial and/or Multiethnic (two or more races) | | | | | |
| Native Hawaiian or Pacific Islander | | | | | |
| White | | | | | |
| Age | Number of "yes" responses | Total number of responses | Percentage of "yes" responses (%) | Total number of patients surveyed | Response rate of patients surveyed (%) |
| Age < 18 | | | | | |
| Age 18 to 34 | | | | | |
| Age 35 to 49 | | | | | |
| Age 50 to 64 | | | | | |
| Age 65 Years and Older | | | | | |
| Sex assigned at birth | Number of "yes" responses | Total number of responses | Percentage of "yes" responses (%) | Total number of patients surveyed | Response rate of patients surveyed (%) |
| Female | | | | | |
| Male | | | | | |
| Unknown | | | | | |

| Payer Type | Number of "yes" responses | Total number of responses | Percentage of "yes" responses (%) | Total number of patients surveyed | Response rate of patients surveyed (%) |
|------------|---------------------------|---------------------------|-----------------------------------|-----------------------------------|--|
| Medicare | | | | | |
| Medicaid | | | | | |
| Private | | | | | |
| Self-Pay | | | | | |
| Other | | | | | |

| Preferred Language | Number of "yes" responses | Total number of responses | Percentage of "yes" responses (%) | Total number of patients surveyed | Response rate of patients surveyed (%) |
|----------------------------------|---------------------------|---------------------------|-----------------------------------|-----------------------------------|--|
| English Language | | | | | |
| Spanish Language | | | | | |
| Asian Pacific Islander Languages | | | | | |
| Middle Eastern Languages | | | | | |

| Other/Unknown Languages | | | | | |

| Disability Status | Number of "yes" responses | Total number of responses | Percentage of "yes" responses (%) | Total number of patients surveyed | Response rate of patients surveyed (%) |
|--------------------------------------|---------------------------|---------------------------|-----------------------------------|-----------------------------------|--|
| Does not have a disability | | | | | |
| Has a mobility disability | | | | | |
| Has a cognition | | | | | |
| Has a hearing disability | | | | | |
| Has a vision disability | | | | | |
| Has a self-care | | | | | |
| Has an independent living disability | | | | | |

| Sexual Orientation | Number of "yes" responses | Total number of responses | Percentage of "yes" responses (%) | Total number of patients surveyed | Response rate of patients surveyed (%) |
|----------------------------|---------------------------|---------------------------|-----------------------------------|-----------------------------------|--|
| Lesbian, gay or homosexual | | | | | |
| Straight or heterosexual | | | | | |
| Bisexual | | | | | |
| Something else | | | | | |
| Don't know | | | | | |
| Not disclosed | | | | | |

| Gender Identity | Number of "yes" responses | Total number of responses | Percentage of "yes" responses (%) | Total number of patients surveyed | Response rate of patients surveyed (%) |
|---|---------------------------|---------------------------|-----------------------------------|-----------------------------------|--|
| Female | | | | | |
| Female-to-male (FTM)/ transgender male/trans man | | | | | |
| Male | | | | | |
| Male-to-female (MTF)/ transgender female/ trans woman | | | | | |
| Non-conforming gender | | | | | |
| Additional gender category or other | | | | | |
| Not disclosed | | | | | |

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:
<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

25

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

337

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

74.2

Table 5. Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

| Race and/or Ethnicity | Number of in-hospital deaths that meet the inclusion/exclusion criteria | Number of hospital discharges that meet the inclusion/exclusion criteria | Rate of in-hospital deaths per 1,000 hospital discharges that meet the inclusion/exclusion criteria (%) |

| Not disclosed | | | |

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

Number of in-hospital deaths among patients aged 18-89 years old or obstetric patients with serious treatable complications

25

Total number of surgical discharges among patients aged 18-89 years old or obstetric patients

189

Rate of in-hospital deaths per 1,000 surgical discharges, among patients aged 18-89 years old or obstetric patients with serious treatable complications

132.3

Table 6. Death Rate among Surgical Inpatients with Serious Treatable Complications by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

| Race and/or Ethnicity | Number of in-hospital deaths that meet the inclusion/exclusion criteria | Number of surgical discharges that meet the inclusion/exclusion criteria | Rate of in-hospital deaths per 1,000 hospital discharges that meet the inclusion/exclusion criteria (%) |

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

Number of NTSV patients with Cesarean deliveries

52

Total number of nulliparous NTSV patients

158

Rate of NTSV patients with Cesarean deliveries

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries
227.3

Table 8. Vaginal Birth After Cesarean (VBAC) Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Table 9. Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

1546

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

10883

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

14.2

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

| Race and/or Ethnicity | Number of inpatient readmissions | Total number of admitted patients | Readmission rate (%) |
|---|----------------------------------|-----------------------------------|----------------------|
| American Indian or Alaska Native | 17 | 50 | 34 |
| Asian | 169 | 1188 | 14.2 |
| Black or African American | 276 | 1462 | 18.9 |
| Hispanic or Latino | 193 | 1453 | 13.3 |
| Middle Eastern or North African | | | |
| Multiracial and/or Multiethnic (two or more races) | suppressed | suppressed | suppressed |
| Native Hawaiian or Pacific Islander | suppressed | suppressed | suppressed |
| White | 797 | 5914 | 13.5 |

| Age | Number of inpatient readmissions | Total number of admitted patients | Readmission rate (%) |
|-------------------------------|----------------------------------|-----------------------------------|----------------------|
| Age 18 to 34 | 71 | 859 | 8.3 |
| Age 35 to 49 | 172 | 1210 | 14.2 |
| Age 50 to 64 | 415 | 2773 | 15 |
| Age 65 Years and Older | 888 | 6041 | 14.7 |

| Sex assigned at birth | Number of inpatient readmissions | Total number of admitted patients | Readmission rate (%) |
|-----------------------|----------------------------------|-----------------------------------|----------------------|
| Female | 759 | 5484 | 13.8 |
| Male | 787 | 5399 | 14.6 |
| Unknown | | | |

| Payer Type | Number of inpatient readmissions | Total number of admitted patients | Readmission rate (%) |

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate - No Behavioral Health Diagnosis

Number of inpatient hospital admissions which occurs within 30 days of the discharge date with no behavioral diagnosis and were 18 years or older at time of admission

858

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

7144

Rate of hospital-level, unplanned, all-cause readmissions after admission with no behavioral diagnosis within 30 days of hospital discharge for patients aged 18 and older

12

Table 14. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate with No Behavioral Diagnosis by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

| Race and/or Ethnicity | Number of inpatient readmissions | Total number of admitted patients | Readmission rate (%) |
|--|----------------------------------|-----------------------------------|----------------------|
| American Indian or Alaska Native | suppressed | suppressed | suppressed |
| Asian | suppressed | suppressed | suppressed |
| Black or African American | suppressed | suppressed | suppressed |

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

| Measures | Stratifications | Stratification Group | Stratification Rate | Reference Group | Reference Rate | Rate Ratio |
|--|-----------------------------------|---------------------------|---------------------|--------------------|----------------|------------|
| HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate | Race and/or Ethnicity | | | Hispanic or Latino | 13.3 | 2.6 |
| HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate | Expected Payer | Medicaid | 16.6 | Private | 7.2 | 2.3 |
| HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate | Expected Payer | Medicare | 15.6 | Private | 7.2 | 2.2 |
| HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate | Age (excluding maternal measures) | | | 18 to 34 | 8.3 | 1.8 |
| HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate | Age (excluding maternal measures) | | | 18 to 34 | 8.3 | 1.8 |
| HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate | Age (excluding maternal measures) | 35 to 49 | 14.2 | 18 to 34 | 8.3 | 1.7 |
| HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate | Race and/or Ethnicity | Black or African American | 18.9 | Hispanic or Latino | 13.3 | 1.4 |
| HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (Mental Health) | Sex Assigned at Birth | Male | 17.7 | Female | 16.2 | 1.1 |
| HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate | Race and/or Ethnicity | Asian | 14.2 | Hispanic or Latino | 13.3 | 1.1 |
| HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate | Sex Assigned at Birth | | | Female | 13.8 | 1.1 |

Plan to address disparities identified in the data

HCAI All-Cause Unplanned 30-day Hospital Readmission Rate for Race and Ethnicity
 ?”F—7 ity #1: American Indian or Alaska Native patients (Rate 34.0); Disparity #7: Black or African American patients (Rate 18.9); Disparity #9: Asian patients (Rate 14.2)
 ?•&V erence Group: Hispanic or Latino (Rate: 13.3)

Measurable Objectives: Reduce the 30-day all-cause unplanned hospital readmission rate among Black/African American, Asian, and American Indian/Alaska Native patients by 2.5% within the next 12 months.

Đ

Actions:

?•WF—Æ— e patient data to identify common medical conditions, social challenges and other factors to develop targeted interventions to address this disparity.

?• &ðvide comprehensive cultural humility training for all staff interacting with patients, designed to enhance awareness of implicit bias and foster skills in culturally sensitive and respectful communication practices that improve patient engagement and satisfaction.

?”6öæGV7B F—VçB 67&VVæ—ær `or social determinants of health (SDOH), then employ the Unite Us platform to bridge gaps in care by addressing identified needs and ensuring their successful resolution through a closed-loop referral process.

?”W`aluate and revise patient education materials for adherence to California/National Culturally and Linguistically Appropriate Services standards.

?” 76W72 7W’&VçB vailability and utilization of professional medical interpreters for all languages spoken by patient population, ensuring 24/7 access.

Đ

HCAI All-Cause Unplanned 30-day Hospital Readmission Rate for Payer

?”F—7 ity #2: Medicaid beneficiaries (Rate 16.6); Disparity #3: Medicare beneficiaries (Rate 15.6)▷
?•&V’erence Group: Private (Rate: 7.2)▷

Measurable Objectives: Reduce the 30-day all-cause unplanned hospital readmission rate among patients with Medi-Cal and Medicare by 2.5% within the next 12 months.▷

▷

Actions:▷

?”ÆPverage patient data to identify common medical conditions, social challenges, payor, and primary care affiliation that correlate with higher readmission rates. This analysis will directly inform the development of targeted interventions to address this disparity.▷

?•7G&VæwF†Vâ tnerships with Enhanced Care Management providers, Federally Qualified Health Centers and other primary care practices, and payors to enhance coordinated care and improve transitions to effectively reduce readmission rates across our shared patient population.▷

?”Vx Æðy the Unite Us platform to bridge gaps in social determinants of care by addressing identified needs and ensuring their successful resolution through a closed-loop referral process.▷

?”–x ÆVÖVçB 7G ategies to increase patient knowledge and utilization of Cal-AIM benefits, specifically prioritizing enrollment in Enhanced Care Management and arranging for medically-tailored meal delivery prior to discharge.▷

▷

HCAI All-Cause Unplanned 30-day Hospital Readmission Rate for Age▷

?”F—7 ity #4: Age 50 to 64 (Rate 15.0); Disparity #5: Age 65+ (Rate 14.7); Disparity #6: Age 35 to 49 (Rate 14.2)▷

?•&V’erence Group: Age 18 to 34 (Rate: 8.3)▷

Measurable Objectives: Reduce the 30-day all-cause unplanned hospital readmission rate among patients aged 35-49 yrs., 50-64 yrs. and 65+ by 2.5% within the next 12 months.▷

▷

Actions:▷

?•WF—Æ— e patient data to assess age-specific risks for readmissions (e.g., cognitive impairment, frailty, social isolation for 65+; chronic disease progression, addiction for 35-64) to develop targeted interventions to address this disparity.▷

?”–çFVprate mental health screening and referral pathways as behavioral health diagnosis often impacts readmissions.▷

?•7G&VæwF†Vâ 6ö÷&F—æ F—öâ v—F, 6¶—ÆÆVB àursing facilities and rehabilitation centers for appropriate acute care for older adults.▷

▷

Monitoring and Evaluation Plan:▷

?•&Pview readmission data within each disparity group to identify trends. Present findings to hospital leadership and relevant committees.▷

?” F§W7B 7F—öâ Æ â & 6VB öâ Vf’ectiveness of interventions and emerging data. Share findings with staff and community partners.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Definition: Care that is respectful of and responsive to individual patient preferences, needs, and values.▷

Performance Indicator: Achieved a high participation rate in Race, Ethnicity, and Language (REaL) data collection video training among Patient Registration Staff. ☐

This achievement ensures that staff are now equipped with the necessary skills to collect sensitive demographic data with cultural humility. This high level of completion provides the hospital with a more accurate and comprehensive understanding of our diverse patient population, which is essential for personalizing care, informing our equity efforts, and evaluating their effectiveness. ☐

Performance Indicator: Improved the ADA Preferred Language and Interpretive Service Compliance for each Clinical Nursing Department. ☐

We have improved our ability to deliver care in our patients' preferred languages. We screen all patients for language preference and use qualified interpreters for non-English encounters. Our advisory councils include diverse community members who co-design discharge instructions to improve cultural relevance. This direct enhancement supports clear communication, reduces misunderstandings, and fosters a more comfortable and respectful care experience for patients with diverse linguistic backgrounds, affirming our commitment to person-centered care.

Patient safety

Definition: Minimizing risks and harm to patients during care delivery. Patient safety is fundamentally defined as the proactive minimization of risks and harm to patients throughout the entire care delivery process. This encompasses a broad spectrum of efforts aimed at preventing adverse events, reducing errors, and creating a secure environment for all individuals receiving medical attention. It is a continuous commitment to safeguarding patient well-being and fostering trust in healthcare systems. ☐

Performance Indicator: A key metric for assessing the effectiveness of patient safety initiatives is the reduction in hospital-acquired conditions. Specifically, significant improvements in rates of pressure injuries (formerly known as bedsores) and falls experienced by patients, particularly those aged 35 years and above, serve as critical performance indicators. These indicators are chosen because they represent preventable complications that can lead to prolonged hospital stays, increased healthcare costs, and significant patient discomfort or injury. Tracking and analyzing these rates allows healthcare facilities to identify areas for improvement, implement targeted interventions, and monitor the impact of their safety programs. ☐

The successful achievement of these performance indicators directly translates into enhanced patient safety, leading to a profound and positive impact on patient outcomes. When patient safety measures are effectively implemented, the risk of preventable harm is substantially reduced. This, in turn, contributes to: ☐

?"-x &oved Patient Health: Patients are less likely to suffer from avoidable complications, leading to faster recovery times and better overall health outcomes. ☐

?"&VGV6VB Ö-=&&-F—G' æB Ö- tality: By preventing errors and adverse events, patient safety initiatives contribute to a decrease in illness, injury, and, in severe cases, death. ☐

?"Væ† æ6VB atient Experience: A safe environment fosters a sense of security and confidence, leading to a more positive and less stressful healthcare experience for patients and their families. ☐

?"FV7&V 6VB †V ÇF†6 &R 6÷7G3 Preventing complications reduces the need for additional treatments, extended hospital stays, and readmissions, thereby lowering the financial burden on both patients and the healthcare system. ☐

?"-æ7&V 6VB Trust and Reputation: Hospitals and healthcare providers that prioritize patient safety build a stronger reputation for quality care, fostering greater trust within the community. ☐

At the core of preventing adverse events and ensuring patient safety lies the critical importance of clear, concise, and consistent communication. This includes communication among healthcare professionals, between healthcare providers and patients, and within the patient's care team. Misunderstandings, medication errors, and misinterpretations of care instructions are often direct consequences of communication breakdowns. Therefore, robust communication strategies are

paramount, encompassing:•

•”6Æ÷6VBÆö÷ 6öÖunication: Ensuring that messages are not only sent but also received, understood, and acknowledged.◦

•7F æF &F— ed Handoff Procedures: Implementing structured processes for transferring patient information between shifts or departments to minimize the risk of omissions.◦

• patient Education and Engagement: Empowering patients and their families with clear information about their condition, treatment plan, and self-care instructions.◦

Furthermore, individualized patient care is equally vital. Recognizing that each patient has unique needs, preferences, and vulnerabilities allows healthcare providers to tailor care plans, anticipate potential risks, and implement personalized preventive measures. This includes:◦

•”6öx &V†Vç6—`e Patient Assessments: Thoroughly evaluating a patient's medical history, current condition, and risk factors to develop a personalized care strategy.◦

• patient-Centered Approach: Involving patients in decisions about their care, respecting their values, and addressing their concerns.◦

•”6öçF–åuous Monitoring and Adjustment: Regularly assessing patient progress and adapting care plans as needed to ensure ongoing safety and effectiveness.◦

In conclusion, patient safety is not merely an aspiration but a fundamental obligation within healthcare. By meticulously defining, rigorously measuring, and continuously improving patient safety practices, healthcare organizations can achieve tangible benefits that resonate deeply with patients, their families, and the entire healthcare community. The unwavering commitment to clear communication and individualized care serves as the bedrock upon which a truly safe and effective healthcare system is built.

Addressing patient social drivers of health

Definition: Screening for and responding to factors like housing, food, income, and transportation.◦

Performance Indicator: In 2024, we screened 10,222 patients for SDOH. Of those, 7,850 or 76.8% of patients were identified to have experienced unmet needs. Housing and economic insecurity were highest among our patient population. ◦

These disparities disproportionately affect vulnerable populations, specifically patients aged 35-65, individuals covered by Medicare and Medicaid, Black or African American individuals, and male patients. In alignment with our commitment to equitable healthcare and improved patient outcomes, we have implemented a multi-faceted approach to address these readmission disparities, focusing on proactive social determinants of health screening, advanced risk assessment, patient-centered interventions, and robust care coordination.◦

Goal: The initiative to address basic needs are anticipated to result in: improved coordination of homeless services; increasing access to services including successful completion of referrals to outpatient services; and creating a safe discharge for individuals without a permanent housing option.◦

Community Collaboration◦

The hospital is an active partner in the Recuperative Care Program, formerly known as the Gregory Bunker Care Transitions Center of Excellence's (The Bunker). This collaborative engages other Dignity Health hospitals and health systems in the region, Medi-Cal Managed Care Plans, Sacramento County and Federally Qualified Health Center, WellSpace Health, and provides respite care for homeless patients with available physical and mental health, and substance abuse treatment. This is a nurse-managed specialized unit that offers patients three meals a day, bed rest, nurse care and self-care. The program provides case management services to assist participants in connecting with outpatient services and community resources.◦

In partnership with Lutheran Social Services and Centene, the hospital aims to assist homeless individuals with severe chronic health and mental health issues obtain and retain housing, care and services designed to achieve stability in their lives. Hospital case managers work directly with

Lutheran Social Services staff to identify participants who will be housed in supportive stabilization apartments and receive intensive case management and supportive services.▫

Supported through the Homeless Health Initiative, and led by Community Solutions and Institute for Healthcare Improvement (IHI), the healthcare and homeless pilot seeks to understand the most meaningful, measurable and transformative contribution health care can make to ending chronic homelessness. Over the course of the 2 year initiative, the Health Systems alongside the homeless Continuum of Care partners in Sacramento, will have made measurable progress toward ending chronic homelessness, with a focus on building racially equitable systems.▫

Supported through the Community Health Improvement Grants Program, a partnership between Exodus Project, St. Vincent de Paul Sacramento, Sacramento Office of the Public Defender, and Boundless Freedom Project. This project enables low-income and homeless adults returning to society from jail in Sacramento County to regain their dignity and well-being. The project pilots the integration of case management, mindfulness training courses, and peer mentoring into the Exodus Project, St. Vincent de Paul Sacramento program's existing wrap-around support services of employment, emergency housing, counseling, and system navigation.▫

Supported through the Community Health Improvement Grants Program, a partnership between International Rescue Committee, Inc., River City Food Bank, and One Community Health. This project aims to provide culturally and linguistically congruent health/mental health navigation services and psychosocial support to refugees and immigrants as an underserved community in Sacramento. This project directly addresses health disparities, promotes independent health access, enhances resilience and self-sufficiency, and connects refugees and immigrants to basic needs and resources.▫

Supported through the Community Health Improvement Grants Program, a partnership between Mercy Holistic Ministries, City of Sacramento City Council District 4, Mount Calvary Baptist Church Del Paso, and Faith Presbyterian Church/Bethany Presbyterian Church. This grant project adds additional showers for the unhoused in Sacramento County. The outcome brings dignity to the unhoused by providing basic showers, hygiene kits, clean clothes, haircuts, meals/beverages, in addition to needed health screenings and social service counseling in partnership with the City and County of Sacramento. This partnership helps navigate homelessness and re-entry into the job market and subsequently affordable housing.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Definition: Providing evidence-based, timely, and appropriate clinical care.▫

▫

Behavioral Health▫

Behavioral health is a significant patient need and component of health. The hospital's initiative to address access to behavioral health services are anticipated to result in: improve patient linkages to outpatient behavioral health services; provide a seamless transition of care; and improve care coordination to ensure individuals are connected to appropriate care and can access necessary services.▫

▫

Community Collaboration▫

The hospital works in collaboration with community-based nonprofit mental health provider, El Hogar Community Services Inc., to provide a seamless process for Medicare, uninsured, undocumented and out of county Medi-Cal patients with mental illness admitting to the emergency department to receive immediate and ongoing treatment and other social services they need for a

continuum of care when they leave the hospital.◊

◊ In partnership with Sacramento County Behavioral Health and Bay Area Community Services, the Crisis Navigation Program serves Sacramento County residents who are experiencing a mental health crisis resulting in functional impairment that interferes with primary activities of daily and independent living.◊

◊ CA Bridge is a program of the Public Health Institute working to ensure that people with substance use disorder receive 24/7 high-quality care in every California health system by 2025. The CA Bridge program seeks to fully integrate addiction treatment into standard medical practice-increasing access to treatment to save more lives. Utilizing a Substance Use Navigator to build a trusting relationship with the patient and motivating them to engage in treatment. The hospital works to reduce the language that stigmatizes people who use drugs, treating substance use disorder like any other disease.◊

◊ The hospitals provide Mental Health Evaluations as well as Psychiatric Consultations to all patients who are in need of those crisis services throughout their hospital stay. The hospitals also provide conservatorship services to patients who lack capacity and have no one to represent their wishes and needs.◊

◊ Psychiatrists are available via remote technology to provide early evaluation and psychiatric intervention for patients, improving access to timely quality care.◊

◊ Supported through the Community Health Improvement Grants Program, a partnership between Greater Sacramento Urban League, Capitol City Black Nurses Association, and Heart of the Matter Counseling. This project focuses on improving mental health for Black men and women in Del Paso Heights and Oak Park in Sacramento, California with ongoing advocacy for Black males and females to obtain required mental health services. To address the stigma around Black males and females seeking mental-emotional support, this program provides therapy in spaces that Black men and women already comfortably frequent such as local barbershops and beauty salons.◊

◊ Supported through the Community Health Improvement Grants Program, a partnership between International Rescue Committee, Inc., River City Food Bank, and One Community Health. This project aims to provide culturally and linguistically congruent health/mental health navigation services and psychosocial support to refugees and immigrants as an underserved community in Sacramento. This project directly addresses health disparities, promotes independent health access, enhances resilience and self-sufficiency, and connects refugees and immigrants to basic needs and resources.◊

◊ Supported through the Community Health Improvement Grants Program, a partnership between The Race and Gender Equity Project, Flyte Studio, Sacramento City Unified School District (SCUSD), Foster Youth Services (FYS), and Monroe Howard Transformational Coaching. The RAGE Healing Pipeline will increase capacity of an intersectional youth-serving-youth cooperative to provide a network of healing, education, arts and leadership programs that work independently and collectively to increase Black youth wellbeing in the Sacramento region. This program will also develop and implement an infrastructure of support, resources and opportunities for Black youth to enter the behavioral health field through entrepreneurship and education/career pathways.

Care coordination

Definition: Ensuring care is organized across providers, settings, and time. The Care Coordination

program at Mercy General has a robust program of patient identification and assessment. The RN Care Coordinators work to see and complete an initial assessment on all inpatient and observation patients within the first 24 hours of admission. This is to identify potential discharge needs that might include referrals to home health, skilled nursing facilities, long-term acute care hospitals, acute rehab facilities, as well as other community resources. The social workers identify patient cases through case finding and multidisciplinary referrals. In addition there is up to 12 hour coverage in the emergency department of both RN Care Coordinators and Social Workers. ☐

Patients are assessed for various social determinants of health, especially homelessness, insurance coverage, ability to afford medications, living situation, transportation issues, substance use disorders and mental health disorders, as well as assistance with other community resources. As those needs are identified the Care Coordination team will make referrals to applicable community resources such as Commercial or Managed Medi-Cal plans for enrollment in complex case management, enhanced case management, or community supports, to substance use programs, to homeless shelter resources, recuperative care programs, housing services, transportation services, elderly assistance services, meals, and other resources as identified. Additionally, Social Workers screen for any identified Mental Health concerns and make appropriate referrals and linkage to outpatient Mental Health programs in the community. ☐

☐ Care Coordination is to provide an initial assessment within 24 hrs of arrival. An initial assessment includes the patients prior level of function, support, equipment the patients use. Care Coordination assessment for primary care and follow up care, medications that need special attention with insurance authorization or necessary to manage meds at home. ☐

The Care Coordination main responsibility is to assist with safe discharge planning and coordination of resources available to the patient in the community to provide continuation of care at an appropriate level. ☐

☐ In addition to the identification process listed above patients needs are also assessed during daily multidisciplinary rounds with the care team. During these discussions issues or concerns are identified to assist with potential risk for readmission and best plan for discharge from the hospital. Each patient at time of admission is assigned a readmission risk score that is part of the components that build on the patient's assessment and development of a safe discharge plan. The discharge plan is driven by the patient's choices and their identified goals. ☐

☐ Care Coordination leadership also participates in weekly rounds with key insurance plans to assure patients are connected to available benefits for additional services. Through this program we are on the cusp of starting a coordinator effort to engage with street medicine for patients that are admitted as well as seen through the emergency department to assure a warm connection is made to this community provider. ☐

☐ All patients are evaluated through the process listed above and efforts are made to assure that each patient is provided access to care and community resources to meet their individual needs. While we want to assure safe transitions from the hospital for all of our patients their choices are a factor that can impact this effort. ☐

The successful integration of SDOH data into our systems significantly enhances our care coordination capabilities. This data allows staff to preemptively identify patients who require additional support, such as social work referrals or post-discharge resources, ensuring smoother transitions and continuity of care that addresses both clinical and social needs. ☐

Goal: The hospital's initiatives to address system navigation is to continue to assist underserved patients admitted to the emergency department (ED) for primary care in finding primary care medical homes or reconnecting them with their assigned provider and other social support services

to reduce their reliance on the ED, improve their health and lower costs.

Access to care

Definition: The ability of patients to obtain timely, culturally appropriate services. ☐

Performance Indicator: Community Health Improvement grant funds were strategically allocated towards housing and homelessness initiatives. ☐

This direct and significant financial commitment is a proactive stance in addressing one of the most critical and fundamental non-financial barriers to consistent healthcare access and adherence: housing instability. A stable living environment is a prerequisite for individuals to consistently access medical appointments, store and take medications, and manage chronic conditions effectively. This achievement strengthens our external partnerships and demonstrates our powerful commitment to improving overall community health and equitable access by tackling root cause social issues. ☐

Performance Indicator: We partner with the community to provide individuals from underrepresented communities access to resources. ☐

As an acute care hospital we operate a 24/7 a week Emergency Department where all patients that present for care are treated. In addition, we are a designated Heart Program and receive patients for cardiac services from outside hospitals. ☐

Patients that are admitted to the hospital are connected to care through discharge planning with follow-up appointments at primary care, specialty care, area clinics and FQHCs depending on their follow-up needs. We also make referrals based on assessment and need for substance use cessation programs with a substance use navigator (SUN) who sees patients through the emergency room and inpatients for follow-up care. ☐

☐

We work closely with emergency psychiatric services to connect patients in need of acute mental health admission to assure patients receive the mental health services that they need. We also work to connect mental health patients to resources in the community for support and ongoing follow up. ☐

☐

Based on assessment patients are also referred to home health, skilled nursing facility, acute rehabilitation, and other skilled services following their hospitalization. We also work with patients to connect to Residential Care Facilities for the Elderly, Assisted Living Facilities or Board and Care Facilities if they are no longer able to maintain independent living. We also connect patients who are homeless to shelters and respite care for access to services such as the Wellspace Bunker. We are also able to connect with attendant care, In Home Support Services or other resources that help support patients to maintain independence in their home. ☐

☐

Patients that are dealing with prescriptions, costs or access are referred to our internal transitional pharmacist for assistance with medication obtainment. They also provide education and support to patients in their understanding of access and medication usage. ☐

☐

The Care Coordination team also works to make sure that patients obtain access to insurance coverage through Medi-Cal and Medicare if they qualify for those programs. We work closely with internal resources to assist patients with application submission for these programs. ☐

☐

Care Coordination is also able to assist patients with connection to community resources for transportation needs to medical appointments, etc. We also are able to arrange rides for patients that are discharging from either inpatient or emergency services that have no other resources available. ☐

☐

Our program looks at each patient as an individual and strives to provide equitable care to each based on needs identified. ☐

□

Community Collaboration

The Sacramento Physicians' Initiative to Reach Out, Innovate and Teach (SPIRIT) operated under the Sierra Sacramento Valley Medical Society exists as a vehicle to involve physicians in the community. SPIRIT recruits physician volunteers to provide free specialty medical care to the uninsured and coordinates and case manages surgical procedures. □

□

We partner with Sacramento County, other health systems and the Sierra Sacramento Valley Medical Society on an initiative to provide primary and specialty care, including surgery, to the region's undocumented immigrants who currently have no insurance or access to care. □

□

The Patient Navigator program focuses on assisting patients who rely on emergency departments for non-urgent needs. The navigators help patients by connecting them to a medical home in an appropriate setting and assisting them with scheduling a follow up appointment along with any other barriers that may create obstacles with accessing care. The Patient Navigator Program represents a unique collaboration between Dignity Health, Community Health Works, formerly known as Sacramento Covered, a community-based nonprofit organization, and community clinics in the region.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)

Y
