

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	MERCY HOSPITAL - BAKERSFIELD
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106150761
Report Period:	1/1/2024 - 12/31/2024
Status:	Submitted
Due Date:	09/30/2025
Last Updated:	09/26/2025
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://shorturl.at/3Fhzg

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

74539

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	64495	74539	86.5
Spanish Language	8884	74539	11.9
Asian Pacific Islander Languages	654	74539	0.9
Middle Eastern Languages	182	74539	0.2
American Sign Language	27	74539	0
Other Languages	181	74539	0.2

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:
<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

6286

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

7832

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

80.3

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	409	6.5	0	
Housing Instability	179	2.8	0	
Transportation Problems	666	10.6	0	
Utility Difficulties	286	4.5	0	
Interpersonal Safety	123	2	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

459

Total number of respondents to HCAHPS Question 19

494

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

92.9

Total number of people surveyed on HCAHPS Question 19

4491

Response rate, or the percentage of people who responded to HCAHPS Question 19

11

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual					
Something else

Not disclosed					

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

410

Total number of respondents to HCAHPS Question 17

494

Percentage of respondents who responded "yes" to HCAHPS Question 17

83

Total number of people surveyed on HCAHPS Question 17

4491

Response rate, or the percentage of people who responded to HCAHPS Question 17

11

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:
<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

24

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

498

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

48.2

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

1089

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

8754

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

12.4

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	5.2	3.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	5.2	3.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	5.2	2.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	7.9	2.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth			Female	8.6	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	10.5	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	10.5	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth			Female	10.4	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	7.9	1.4
California Maternal Quality Care Collaborative (CMQCC) Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth	Expected Payor			Medicaid	0.1	1.3

Plan to address disparities identified in the data

Disparity 1-2, and 4 Plan: Age-Related Readmit Disparities (65+, 50-64, and 35-49 Vs.18-34)

Population Impact: Adults 35-65+ experiencing higher unplanned readmissions compared to younger patients (18-34).

Action Plan: Enhanced chronic disease management education during hospitalization for older patients. Increase utilization of transitional care clinics to bridge the gap for high risk/older patients. Follow up phone calls within 48-72 hours after discharge.

Measurable Objectives: Reduce 30-day all-cause readmissions by 15% over the next 2 years.

Disparity 3 and 9 Plan: Expected Payor-Related readmit Disparities (Medicare and Medicaid VS Private Insurance)

Population Impact: Adults over 65, persons with disabilities, and persons of all ages with state/federal funded healthcare.

Action Plan: Enhanced chronic disease management education during hospitalizations for patients with high risk factors and/or complex comorbidities. Increase utilization of transitional care clinics, telemedicine, and home health to bridge the gap and ensure a smoother transition to recovery. Follow up phone calls within 48-72 hours after hospital discharge.

Measureable Objectives: Reduce 30-day all-cause readmissions by 15% over the next 2 years.

Disparity 5 and 8 Plan: Sex Assigned at Birth Related Readmit Disparities

Population Impact: Males

Action Plan: Provide male-centered health education focusing on medication adherence, lifestyle

management, and follow-up care. Strengthen discharge planning with clear, simplified instructions and early outpatient follow-up for high-risk male patients.

Measureable Objectives: Reduce 30-day all-cause readmissions by 15% over the next 2 years.

Disparity 6 and 7 Plan: Race and/or Ethnicity Readmit Disparities (Asian and Black or African American VS Hispanic or Latino)

Population Impact: Asian and Black or African American population

Action Plan: Provide discharge instructions and health education in culturally relevant formats and languages. Address barriers such as housing, food security, and access to medications that disproportionately affect African American and Asian men.

Measurable Objectives: Reduce 30-day all-cause readmissions by 15% over the next 2 years.

Disparity 10 Plan: Expected Payer (NTSV) C-Section Birth Rate by Expected Payor (Private Insurance VS Medicaid)

Population Impact: Pregnant people at least 37 weeks gestation who had a Cesarean Section birth during their first pregnancy who also have Private Insurance.

Action Plan: 62% of our Labor and Delivery nurses have completed Spinning Babies education. This education teaches the nurses and expecting pregnant people gentle exercises and body positions that encourage optimal fetal positioning. For babies in a breech position, these techniques may encourage them to turn head-down naturally, thus reducing the need for Cesarean Deliveries.

Measureable Objectives: Reduce the volume of cesarean section births carried out for non-medical related reasons over the next year.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Person-centered care is a holistic approach to health delivery that places the individual and their values, preferences, and lived experiences at the center of decision-making. Rather than focusing solely on disease management, person-centered care emphasizes dignity, respect, and collaboration between patients, families, and providers to achieve the best health outcomes.

A critical component of person-centered care is language access services. Effective communication is essential for safe and equitable healthcare. We offer interpreter services, translation of health materials, and bilingual staff to ensure that patients with limited English proficiency can fully understand their care plans and actively participate in decision-making. Clear communication builds trust, reduces errors, and promotes patient confidence in the healthcare system. Improvements include expanding the language offerings our discharge instructions can be printed in for an enhanced discharge experience.

Patient safety

Patient safety is central to delivering high-quality care in hospitals. The High Reliability Organization (HRO) model, adapted from industries such as aviation and nuclear power, provides a framework for hospitals to operate safely and effectively in complex, high-risk environments. The goal is to create a culture where harm is rare, errors are anticipated, and systems are designed to respond quickly

when risks arise.

By applying the HRO model our hospital transforms safety from a set of isolated initiatives into an embedded culture of reliability and trust. Through vigilance, resilience, and inclusive teamwork, patient harm is minimized, care quality improves, and hospitals become safer places for every patient. Our decreasing number of Hospital Acquired Infections (HAIs) for the last 2 years is reflective of our commitment to patient safety.

Addressing patient social drivers of health

Our hospital recognizes that 90% of our top 10 disparities in patient outcomes are directly attributable to 30-day all cause readmissions.

Our health system is committed to advancing health equity by reducing avoidable hospital readmissions through evidence-based, patient-centered interventions. Recognizing that social and structural barriers disproportionately affect vulnerable populations, we aim to ensure all patients-regardless of race, income, language, or housing status-receive equitable support during their transition from hospital to home. To address disparities, we have implemented three core strategies:

1. Follow-up appointments prior to discharge, scheduling follow-up appointments before patients leave the hospital ensures continuity of care, reduces missed visits, and provides timely monitoring of recovery. This practice particularly benefits patients with limited health literacy or transportation challenges by reducing the burden of navigating appointment scheduling independently.
2. Utilization of transition care clinics, transitional care clinics provide a structured bridge for high-risk patients between hospital and primary care. These clinics focus on medication reconciliation, education, and reinforcement of discharge instructions, which are critical for patients managing multiple chronic conditions. By incorporating culturally appropriate communication and interpreter services, we reduce barriers that underserved populations may face in understanding and adhering to care plans.
3. Follow-up phone calls for high-risk patients. Within 48-72 hours of discharge, high-risk patients receive personalized phone calls from care coordinators or nurses. These calls address medication concerns, clarify instructions, and identify social needs such as access to food, housing, or transportation. When social barriers are identified, patients are linked with community-based resources, thereby addressing upstream determinants of health that influence readmission risk.

Addressing social determinants of health (SDoH) is essential to improving patient outcomes beyond clinical care. Our hospital has prioritized this effort, achieving a screening rate of over 80% for all inpatient stays during the 2024 calendar year. These screenings ensure the most vulnerable of our patients are assessed for critical social needs such as housing, food security, and transportation. By identifying these factors early, we can connect patients with community resources and reduce barriers that impact recovery and overall well-being. This high level of screening demonstrates our commitment to whole-person care and advancing health equity. The hospital sponsors through strategic partnership with Kern Community Foundation a county-wide network of community-based organizations to utilize a referral platform technology (Unite Us) to coordinate an individual's social needs. At present there are 582 programs to serve patients and community members accessible through the platform, and the hospital issued 205 referrals for 50 clients in 2024. The hospital hopes to grow its patient referrals by 15% through 2025.

Our Community Health Improvement Program is designed to support the well-being of vulnerable populations by addressing both medical and non-medical needs. The program includes a community health initiative that assists uninsured and underinsured individuals with health insurance enrollment, improving access to care. Community wellness programs provide education and support for chronic disease management, empowering individuals to take charge of their health. Additionally,

the homemaker care program offers training for non-medical in-home supportive service workers for seniors/adults with disabilities, improving their quality of life and strengthening workforce development.

To ensure our strategies reduce disparities, we will monitor readmission rates stratified by race, ethnicity, language, and insurance status. We have implemented a multi-faceted approach to address these readmission disparities including advanced risk assessments and reassessments, patient centered interventions, and being proactive when screening patients for social determinants of health upon admission and throughout their hospitalization.

By embedding equity into care transitions, our plan not only reduces readmissions but also narrows gaps in access to outcomes. Through proactive follow-up, transition support, and patient -centered communication. We are building a system where every patient, particularly those most at risk, has the resources and support needed for a safe recovery. Our goal is to decrease identified readmission disparity gaps by 15% over the next 2 years.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Effective treatment is care that works, is delivered safely and consistently, and leads to better health outcomes for all patients. Mercy Hospital demonstrates effective treatment of sepsis through evidence-based protocols that improve patient outcomes and reduces mortality. Increased compliance with the SEP-1 bundle, ensuring timely and evidence-based interventions. As compliance has risen, we have observed a steady decline in sepsis-related mortality rates. By embedding equity into our approach, we ensure that all patients-regardless of race, language, or background-receive consistent, high-quality care that improves survival and outcomes.

Care coordination

Our hospital is committed to advancing health equity by improving care coordination and addressing disparities in access, communication, and outcomes. We recognize that patients from underserved populations, including those with limited English proficiency, low income, or complex chronic conditions, face disproportionate barriers during care transitions. To reduce avoidable readmissions and improve outcomes, we are embedding equity-focused strategies into every step of the care continuum.

We prioritize seamless transitions between hospital, primary care, and specialty services. Prior to discharge, high risk patients receive follow-up appointments scheduled with their primary and specialty providers, reducing the burden of navigating the healthcare system independently. We also utilize transitional care clinics to provide short-term, intensive support until long-term providers assume care. These clinics reinforce treatment plans, reconcile medications, and address patient questions in a timely and culturally responsive manner.

Our standardized discharge planning protocols are designed to ensure every patient leaves the hospital with clear, actionable next steps. This includes comprehensive medication reconciliation and education, with materials available in multiple languages. Inclusion of family members or caregivers in discharge discussions to reinforce understanding and support adherence.

Assessments of social determinants of health, such as housing, transportation, and food access, with referrals to community partners as needed, and follow up phone calls within 48-72 hours for high risk patients to address immediate concerns and prevent complications.

To ensure equity, we engage interpreters, patient navigators, and community partners to support vulnerable populations, ensuring that no patient is left behind due to language or social barriers. Patients and families are viewed as active partners in care, empowered to participate in shared decision-making and raise concerns.

By aligning care coordination with equity principles, we are creating a system where patients experience smoother transitions, greater confidence in their care, and fewer avoidable hospitalizations. Our commitment is not only to reduce readmissions but also to close gaps in care, improve trust, and ensure that every patient receives safe, reliable, and person-centered care across the continuum.

Areas for improvement include enhancing communication across care settings and expanding follow-up support for high-risk patients.

Access to care

Increasing access to care is essential for advancing health equity, improving patient outcomes, and reducing avoidable hospital utilization. Access goes beyond the availability of services-it includes affordability, timeliness, cultural responsiveness, and the ability of patients to navigate the healthcare system effectively.

We have expanded our care coordination team, scheduling follow-up appointments before discharge, utilizing transitional care clinics, and providing care navigation services to help those patients with chronic conditions transition seamlessly to primary and specialty care. Offering interpreter services, translated materials, and culturally responsive communication ensures that patients with limited English proficiency can fully participate in their care. We also collaborate with local organizations to provide transportation, housing assistance, or social support to address non-medical barriers that impact access. Helping patients understand insurance options and connecting them to financial support programs reduces cost-related delays in seeking care.

Patient and family engagement is critical to improving access. We empower patients through health education, shared decision-making, and clear discharge instructions to enhance their ability to manage conditions and navigate follow-up care. By including families and caregivers, hospitals strengthen support systems that help patients overcome barriers outside of the clinical setting.

Increasing access to care requires a holistic, equity-driven approach that integrates clinical excellence with social support, communication, technology, language access, and community partnerships. Hospitals can reduce disparities, improve trust, and ensure that all patients-regardless of background or circumstance-have the opportunity to achieve their best health. Mercy Hospital is committed to increasing access in rural areas by offering community outreach programs that provide health screenings, preventive care, and education. Through mobile clinics and local partnerships, we reduce barriers such as distance and limited provider availability, while connecting residents to follow-up and primary care. These efforts strengthen community trust and help reduce disparities in rural health outcomes.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
