

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	ST. ELIZABETH COMMUNITY HOSPITAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106521041
Report Period:	1/1/2024 - 12/31/2024
Status:	Submitted
Due Date:	09/30/2025
Last Updated:	09/24/2025
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	https://tinyurl.com/397ceuwr

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

35084

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	31964	35084	91.1
Spanish Language	3029	35084	8.6
Asian Pacific Islander Languages	50	35084	0.1
Middle Eastern Languages	suppressed	35084	suppressed
American Sign Language	suppressed	35084	suppressed
Other Languages	13	35084	0

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:
<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

1741

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

2114

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

31

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	212	12.2	0	0
Housing Instability	87	5	0	0
Transportation Problems	326	18.7	0	0
Utility Difficulties	134	7.7	0	0
Interpersonal Safety	79	4.5	0	0

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

309

Total number of respondents to HCAHPS Question 19

322

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

96

Total number of people surveyed on HCAHPS Question 19

1894

Response rate, or the percentage of people who responded to HCAHPS Question 19

17

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

290

Total number of respondents to HCAHPS Question 17

322

Percentage of respondents who responded "yes" to HCAHPS Question 17

90.1

Total number of people surveyed on HCAHPS Question 17

1894

Response rate, or the percentage of people who responded to HCAHPS Question 17

17

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:
<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarean birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

Number of NTSV patients with Cesarean deliveries

42

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

71

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

100

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

237

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

2380

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

10

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	5.4	4.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	5.4	3.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	5.4	3.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	4.3	3.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	4.3	2.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	7.1	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth			Female	8.6	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	4.3	1.4

Plan to address disparities identified in the data

The top disparities identified in the health equity report for the hospital are 30-day readmissions by expected payor, age, sex assigned at birth, and race/ethnicity. It's important to note how the unique demographics of our surrounding county influence this data. With a notably older and predominantly white adult population according to U.S. Census data, there is a potential overrepresentation in the data, skewing the stratification calculations. For instance, 14.2% of our community lives in poverty, and a significant portion – nearly half of Tehama County's residents, or 31,250 individuals – are Medi-Cal members, as reported by the Partnership Health Plan of California's 2024 Annual Data. Furthermore, about 6% of our community members lack any health insurance coverage underscoring . This demographic landscape is also evident in our payer mix, with 49% of our patients covered by Medicare and 24% by Medicaid, underscoring the correlation between age and poverty rates reflected in the identified disparities.

The hospital has developed a Health Equity Plan designed to address the disparities identified in our data. The plan details the actions we intend to take, outlining the anticipated impact on affected populations, setting clear, measurable objectives for improvement, and establishing specific timeframes for achieving these goals.

To drive continuous improvement, the hospital will conduct thorough reviews of all readmissions, seeking opportunities to enhance patient care. These reviews will analyze whether factors contributing to readmission stem from broader systemic issues or unique individual circumstances. Such distinctions will directly inform our targeted action plans, which may include essential staff training and education to refine our practices. Throughout this iterative process, our Senior Leadership will play an undeniably crucial role, actively supporting and guiding the resolution of every identified challenge, ensuring we consistently deliver the highest quality of care.

Furthermore, our commitment to continuity of care is demonstrated by ensuring all patients receive follow-up appointments with our South County clinic located in Corning, offering support for those without a primary care physician; conducting post-discharge follow-up calls within 48-72 hours to address medication and appointment needs; and appropriately utilizing home health services.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

The hospital is deeply committed to providing Person-Centered Care, meaning our care is respectful and responsive to individual patient preferences, needs, and values, always considering their unique cultural and linguistic backgrounds to guide clinical decisions. In support of this commitment, the hospital reviews all readmissions. These reviews delve into each patient's unique journey, preferences, and circumstances, aiming to uncover both systemic issues and specific opportunities to enhance personalized care. The goal is to prevent future readmissions by better aligning care with what truly matters to each patient. Targeted action plans, including specialized staff education on person-centered approaches, are developed as appropriate. Hospital Senior Leadership fully supports and guides the resolution of all identified challenges, ensuring high-quality, compassionate, and truly individualized care.

Patient safety

To minimize patient harm and ensure equitable care for all, the hospital strategically identifies healthcare disparities by analyzing quality and safety data broken down by sociodemographic characteristics. This critical process targets areas known to have disparities in patient safety outcomes, as well as universal measures like effective communication and patient experience, which are foundational to safe care. We carefully select relevant sociodemographic factors for this analysis, including age, gender, preferred language, and race/ethnicity, to accurately pinpoint where patient safety might be compromised for specific groups.

This vital data on healthcare social determinants of health and disparities is drawn from the CommonSpirit Clinical Scorecard's Health Equity Dashboard (available at facility, market, and system levels) and the Social Determinants of Health documentation and reports within St. Elizabeth Community Hospital. This robust data foundation enables us to identify and address safety risks systematically.

Addressing patient social drivers of health

Comprehensive screening and assessment for Social Determinants of Health (SDOH) needs are conducted for all adult inpatients. Identified health-related social needs, including but not limited to food insecurity, housing instability, transportation access, utility difficulties, interpersonal safety, education and literacy, and access to appropriate medical equipment, trigger the provision of information regarding relevant community resources and support services.

Complementing direct patient support, the hospital utilizes the Community Health Needs Assessment (CHNA) to inform the strategic identification and prioritization of broader health imperatives within its defined service area. The priorities derived from the CHNA subsequently guide the institution's community health improvement programs, community benefit activities, and collaborative partnerships, thereby contributing to the comprehensive mitigation of social drivers of health and the enhancement of public well-being.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

The hospital is committed to systematically addressing disparities in patient outcomes. This involves a multi-pronged approach that includes:

- Analyzing patient outcomes data, stratifying by relevant sociodemographic factors (e.g., race, ethnicity, language, socioeconomic status), to pinpoint where disparities in effective treatment manifest.
- Investigating the underlying systemic, clinical, and social determinants contributing to identified disparities, moving beyond individual patient factors to uncover biases in protocols, resource allocation, communication, or staff training.
- Actively reviewing and, where necessary, revising clinical pathways and treatment protocols to ensure they are culturally competent, linguistically accessible, and universally applicable, reducing unintended biases in care delivery.
- Implementing ongoing, mandatory training for all clinical and support staff on unconscious bias, cultural humility, health literacy, and equitable application of evidence-based practices, ensuring care is consistently delivered without prejudice.
- Developing strategies to improve communication with diverse patient populations, ensuring full understanding of treatment plans, and actively incorporating patient preferences and values, which are critical for adherence and efficacy.
- Ensuring equitable access to necessary resources (e.g., medication assistance programs, culturally tailored patient education materials) and providing dedicated care navigation support to overcome barriers to effective treatment for all individuals.
- Utilizing technology to flag potential disparities, personalize treatment reminders, and provide decision support tools that promote evidence-based practices universally.
- Establishing clear accountability metrics and routinely monitoring the impact of interventions on reducing disparities in treatment outcomes, ensuring continuous improvement and equitable care for every patient.

Care coordination

To systematically address identified healthcare disparities, the hospital develops a comprehensive written action plan. This plan involves bringing together efforts from multiple departments and programs, including quality and safety, to ensure a cohesive approach. Strategies often encompass technology solutions, interdepartmental staff training, streamlined process improvements, and integrated support for patients' health-related social needs. The action plan outlines the specific disparity, the target population, the measurable improvement goal, the coordinated strategies and allocated resources, and the clear process for joint monitoring and reporting progress. The hospital continually refines its coordinated approach by applying lessons learned to future disparity interventions.

Access to care

Ensuring equitable access to care is central to the hospital's mission. The hospital is committed to eliminating barriers that prevent individuals from receiving necessary healthcare services, including those related to geographic location, socioeconomic status, and other personal characteristics. The hospital's comprehensive efforts include, but are not limited to:

- Analyzing healthcare utilization data alongside socioeconomic and geographic information to identify which populations are being underserved and why.
- Expanding both physical and virtual points of entry to care, including community clinics, mobile units, home-based care, and telehealth options, to bring services closer to patients.

- Providing patient navigators and community health workers, as appropriate, to assist with practical challenges like transportation, scheduling, and understanding complex health information.
- Implementing programs and community-based partnerships that help address the financial burden of healthcare, extending beyond insurance enrollment to include assistance with co-pays, deductibles, and medication costs.
- Ensuring that communication is not a barrier by providing professional interpretation services in all necessary languages and training all staff in cultural humility to respect and respond to diverse patient backgrounds.
- Proactive community engagement to actively engage with community leaders and organizations to build trust, reduce stigma, and co-create solutions for improved access that is truly responsive to local needs.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
