

# Lab Line

## Defining Collection Types

Understanding the Collection Priority Menu can help make ordering lab tests easier.

- ASAP – Priority, patient clinically stable
- Routine – Next phlebotomy rounding collection which queues to lab on the hour
- STAT – Clinically unstable or currently in OR or ED
- Timed – Request a specific time (ex: drug levels) and for frequency request (ex.q6hr, q3day)

### Frequency of qAM

- Test will be queued to the lab at 0305 for the next day morning rounds
- Do not change default order details. Assigning a time in qAM will delete the order
- Midnight ordering will queue for following day (ex. An order entered on 4/1 at 0030 will queue for 4/2 at 0305)
