

Mercy Medical Center Mt. Shasta 2019 Community Health Needs Assessment

EXECUTIVE SUMMARY

Mercy Medical Center Mt. Shasta is a non-profit health care facility designated a 25-bed Critical Access Hospital, accredited by The Joint Commission, and a member of the American Hospital Association. The Hospital is located off of California Interstate 5 in Mt. Shasta and the facility's campus is 14 acres in size located at the base of Mount Shasta. In addition to the acute care hospital, MMCMS also operates three Rural Health Clinics: Mercy Mt. Shasta Community Clinic, Mercy Lake Shastina Community Clinic and the Dignity Health Pine Street Clinic. With more than 250 skilled professionals and support staff, approximately 45 active doctors, and more than 80 dedicated volunteers, Mercy Mt. Shasta has been consistently named in the Top 100 Critical Access Hospitals by the National Rural Health Association.

Rooted in Dignity Health's mission, vision and values, Mercy Medical Center Mt. Shasta (MMCMS) is dedicated to delivering community benefit with the engagement of its management team, Community Board and other key stakeholders within the community. The Board is composed of community members who provide stewardship and direction for the hospital as a community resource.

The purpose of this community health needs assessment (CHNA) is to identify and prioritize significant health needs of the community served by MMCMS. The significant health needs identified in this report will help guide the hospital's community health improvement programs and community benefit activities, as well as its collaborative efforts with other organizations that share a mission to improve health. This CHNA report meets the requirements of the Affordable Care Act and of California Senate Bill 697 that not-for-profit hospitals conduct a community health needs assessment at least once every three years.

While MMCMS focuses community health programs and services in its primary service area, it does not exclude the needs of those residing in neighboring communities, following its commitment to raise the common good and improve the quality of life for all.

MMCMS is committed to involving residents in the community needs assessment process while being a good steward of limited resources. MMCMS was a contributing participant to the comprehensive community health improvement planning process that was initiated by Siskiyou County Public Health. In an effort to reach a cross-section of the population, the 2019 CHNA utilized a mixed-methods approach that included the collection of secondary or quantitative data from existing data sources and community input or qualitative data from surveys and meetings with key community stakeholders. The process was iterative as both the secondary and primary data were used to help inform each other. The advantage of using this approach is that it validates data by cross-verifying from a multitude of sources. The health needs assessment process aimed to gain a thorough understanding of the medically underserved, low-income and minority populations living in MMCMS' service area. Using a convenience sampling (non-probability sampling) approach,

locations were selected based on the perception of being able to encounter our medically underserved, low-income and minority populations.

Siskiyou County Public Health also enlisted the expertise of local public health system partners to guide the assessment planning efforts to improve Siskiyou County's health. Representatives of these partner organizations formed a collaborative, titled Siskiyou Well, which included representatives from local hospitals, federally qualified health centers, tribal health, and non-profit organizations. During the CHNA process, the Siskiyou Well collaborative engaged residents and health system stakeholders to:

- Examine the current health status of Siskiyou County
- Identify the most pressing health issues
- Determine what resources and opportunities exist to address those issues

Prioritized Significant Health Needs

The assembled data, information, and analyses provide a comprehensive identification and description of significant community health needs. After a review of all available primary and secondary data, and taking into consideration the focus group participants' discussions, ranking and prioritization process, the following areas were identified as the areas of the most significant need for the community:

- Access to Care
- Maternal and Child Health
- Mental Health

MMCMS partnered with Siskiyou County Public Health and Fairchild Medical Center to conduct the CHNA. This CHNA report was adopted by the North State Service Area community board in June 2019 (tax year 2018), and follows the previous CHNA report adopted in May 2018 (tax year 2017). This report is widely available to the public on the hospital's web site, and a paper copy is available for inspection upon request at Mercy Medical Center Mt. Shasta's Community Health Office. Written comments on this report can be submitted to the Mercy Medical Center Mt. Shasta's Community Health Office, 914 Pine Street, Mt. Shasta, CA 96067 or by e-mail to alexis.ross@dignityhealth.org.

MISSION, VISION AND VALUES

Mercy Medical Center Mt. Shasta (MMCMS) is a member of Dignity Health, a 40 hospital faith-based organization providing health care services in California, Nevada and Arizona. MMCMS is designated as a not-for-profit, 25-bed Critical Access hospital and provides a full range of health care services and programs that contribute to the physical, psychological, social and spiritual well-being of area residents and visitors of Siskiyou County. At Dignity Health, we unleash the healing power of humanity through the work we do every day, in hospitals, in other care sites and the community.

Our Mission

We are committed to furthering the healing ministry of Jesus. We dedicate our resources to:

- Delivering compassionate, high-quality, affordable health services;
- Serving and advocating for our sisters and brothers who are poor and disenfranchised; and
- Partnering with others in the community to improve the quality of life.

Our Vision

A vibrant, national health care system known for service, chosen for clinical excellence, standing in partnership with patients, employees, and physicians to improve the health of all communities served.

Our Values

Dignity Health is committed to providing high-quality, affordable healthcare to the communities we serve. Above all else we value:

Dignity - Respecting the inherent value and worth of each person.

Collaboration - Working together with people who support common values and vision to achieve shared goals.

Justice - Advocating for social change and acting in ways that promote respect for all persons and demonstrates compassion for our sisters and brothers who are powerless.

Stewardship - Cultivating the resources entrusted to us to promote healing and wholeness.

Excellence - Exceeding expectations through teamwork and innovation.

COMMUNITY DEFINITION

Mercy Medical Center Mt. Shasta (MMCMS) serves a core service area population of 27,099 residents within the broader Siskiyou County. Siskiyou County is a rural county with the residents spread out over approximately 6,347 square miles. Due to the rural nature of the county, access to care is a consistent barrier for the many residents who are medically underserved and low-income and minority populations. The following zip codes make up the core service area for MMCMS: 96025, 96057, 96067, 96094, and 96097. While MMCMS focuses community health programs and services in its primary service area, it does not exclude the needs of those residing in neighboring communities, following its commitment to raise the common good and improve the quality of life for all.

The service area's population remains flat with a slight decline between 2010 and 2019 by -1.4%, while California has grown 6.8% within the same timeframe. The age and sex distribution within MMCMS's service area indicates that 50.9% are female and 49.1% are male and that there are more individuals that are 65 and over (25.3%) as compared to California (14.5%) and this age segment is projected to experience an annual growth rate of 1.8%. The largest age segment within MMCMS's service area are those between the ages of 45 to 64, accounting for 7,441 individuals or 27.5% of the service area population. Other pertinent demographics for MMCMS' service area are listed below:

• Hispanic or Latino: 12.0%

• Race: 77.2% White, 1.7% Black/African American, 2.0% Asian/Pacific Islander, 7.1% All Others

• Median Income: \$45,279

Uninsured: 15.7%Unemployment: 5.3%

No High School Diploma: 9.4%
Medicaid Population: 35.6%

• Other Area Hospitals: 1

• Medically Underserved Areas or Populations: Yes

RESOURCES POTENTIALLY AVAILABLE TO ADDRESS NEEDS

While resources are available to address the needs of the community, the needs are too significant and diverse for any one organization. Making a substantial and upstream impact will require the collaborative efforts of community organizations, local government, local business leaders, and institutions. Siskiyou County is home to a wealth of organizations, businesses, and nonprofits including MMCMS. The table below illustrates potential resources available for the significant health needs in Shasta County:

Significant Health Need	Potential Community Resource
Access to Care	Dignity Health Pine St. Clinic
	Dunsmuir Clinic
	Fairchild Medical Center
	McCloud Clinic
	Mercy Lake Shastina Community Clinic
	Mercy Medical Center Mt. Shasta

IMPACT OF ACTIONS TAKEN SINCE THE PRECEDING CHNA

Aging issues, child abuse/neglect, domestic violence, heart disease & stroke, and obesity were identified as significant health needs in the 2018 CHNA. Since the preceding CHNA several improvements in health behaviors, health outcomes, resources and services have been made. In addition, MMCMS's annual Community Benefit Reports and Plans describe actions and impacts in greater detail. The most recent report is available at

http://www.dignityhealth.org/cm/content/pages/community-benefit-reports.asp.

Below are examples of the programs developed through collaborative efforts with community based organizations that represent actions taken since the preceding CHNA that directly address identified significant health needs:

Aging Issues

- A trained diabetes educator on staff available at no cost to patients referred through our clinics and area providers
- Education Table 3x per year with our Diabetes educator at the Senior Nutrition Meals in City Park
- Local Community Health grant to Meals on Wheels
- Staff Nutritionist will present on topics of nutrition and cooking for the community in conjunction with the Senior Nutrition program
- Two articles published in the local newspaper on aging issues written by a gerontologist presently living in the community
- The hospital has secured a Podiatrist to come to one of our clinics one day per month in response to the number one stated need by elders in the community in our recent CHNA
- Three articles in the local newspaper written by staff professionals on topics of prevention and treatment

Heart Disease & Stroke

- Heart Check Program
- Continuation of CHF education program with Medical/Surgical staff in our rural health clinics
- Articles in the local newspaper written by staff professionals on topics of prevention and treatment

Obesity

- Community Grant dollars to Great Northern Services (GNS) in support of their emergency food pantries established in every elementary school in our service area
- Community Grant dollars to Great Northern Services in support of their "Cook'n Up Healthy" courses in the middle school.
- Support for GNS's "Snack Bag" program for children over the weekends and holidays and their Summer Lunch program in city parks.

- Hospital involvement and encouragement for a local interdisciplinary community effort,
 Team Shasta, involving local politicians, police, business owners, and residents to address issues of hunger and homelessness.
- Individualized Nutritional Counseling Program with MMCMS Registered Dietitian
- Articles in the local newspaper written by staff professionals on the topic of prevention and treatment

Safety & Violence – including child abuse/neglect and domestic violence

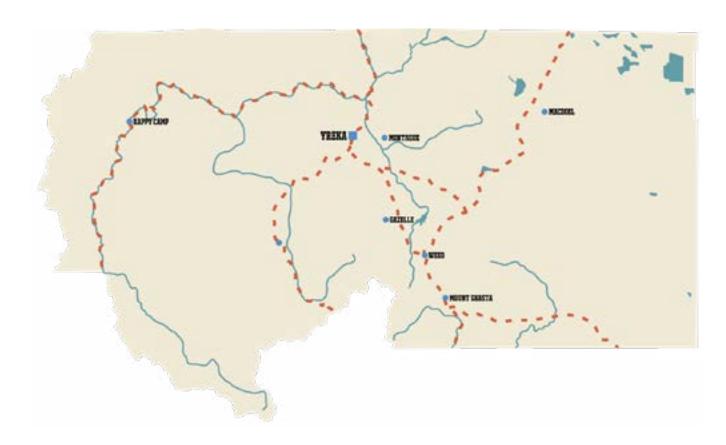

- The Human Trafficking (HT) initiative focuses on:
 - o Educating staff to identify and respond to victims within the hospital;
 - o Provide victim-centered, trauma-informed care;
 - o Collaborate with community agencies to improve quality of care;
 - o Access critical resources for victims; and
 - o Provide and support innovative programs for recovery and reintegration
- Continue community education efforts for the community to identify and refer victims to appropriate interventions
- Continue to collaborate with community agencies to improve coordination of initiatives

Ongoing collaboration with internal and external key stakeholders, post-acute care services, and the Care Coordinators has proven to be integral when addressing community needs outside the walls of the hospital.

SISKIYOU WELL

Our vision is to meet the needs of our community through collaboration and intentional planning to ensure access to quality services, care, and education that support the health and wellness of the whole person.

Siskiyou Well was established in 2019 as a community health and wellness collaborative between Siskiyou County Public Health, Fairchild Medical Center, Mercy Medical Center Mt. Shasta and local community partners.

EXECUTIVE SUMMARY

The Siskiyou Well Community Health Needs Assessment is a report on the status of health and well-being of Siskiyou County residents. In past years, organizations involved have completed similar work independently related to their service area(s). For the 2019 community health needs assessment (CHNA), Siskiyou County Public Health, Fairchild Medical Center, and Mercy Medical Center Mt. Shasta sought to form a collaboration which would capture the health of the entire community (hereby referred to as the "key partners"). The collaborative Siskiyou Well was formed, and community organizations throughout the county were invited to participate. Siskiyou Well embodies the commitment to the community which each of our organizations shares, and fosters the level of collaboration necessary for our community to thrive. Our vision is to meet the needs of our community through collaboration and intentional planning to ensure access to quality services, care, and education that support the health and wellness of the whole person.

The purpose of this CHNA is to identify and prioritize the health priorities of Siskiyou County. The health priorities identified in this report will help guide the community health programs and activities of the involved organizations, both independently and collaboratively. The Patient Protection and Affordable Care Act (ACA), enacted on March 23, 2010, added a requirement that hospitals covered under section §501(r) of the Internal Revenue Code conduct a Community Health Needs Assessment (CHNA) and adopt an implementation strategy to meet the community health needs identified through the CHNA at least once every three years. This CHNA report meets those requirements. This CHNA report also meets the requirements of the Public Health Accreditation Board measures 1.1.1-1.1.3 that a local Public Health Department conduct a community health assessment at least once every five years.

Siskiyou County is located in rural Northern California on the California-Oregon border with a population of approximately 45,000. Siskiyou County is a geographically large county covering 6,347 square miles, making the population density approximately seven people per square mile.

The service population of Siskiyou County Public Health (SCPH) covers the entire county. In recent years, SCPH has renewed its commitment to bringing services to the unincorporated and outlying areas of the community which are often home to a more vulnerable population. Fairchild Medical Center is located in the county seat of Yreka along with SCPH and primarily serves the northern, eastern, and western sections of the county. Mercy Medical Center Mt. Shasta, is located in Mount Shasta and serves the southern part of the county.

Siskiyou Well analyzed many aspects of health and well-being, rather than simply the absence or presence of clinical care, to obtain a comprehensive understanding of the factors which influence the quality of life and health in our county. Information was gathered on topic areas such as health outcomes, mortality rates, economic factors, health behaviors, and access to care. This process involved a combination of quantitative and qualitative data. The outcome of the 2019 CHNA is presented in upcoming sections and the community health survey and results can be found in Appendix C of this document. The health priorities were identified through the data collection process and prioritized during a steering committee meeting. A detailed description of the process is given beginning on page 16 in the Assessment Process and Methods section of this report.

Following the initial analysis of the collected data, the following were identified as the preliminary health priorities for Siskiyou County:

- Abuse and Neglect
- Access to Care
- Aging
- Chronic Disease
- Drug, Alcohol, and Tobacco Use
- Food and Nutrition
- Homelessness

- Infectious Disease
- Maternal/ Child Health
- Mental Health
- Oral Health
- Pain Management
- Reproductive Health
- Unintentional Injury

While there are potential resources available to address the identified needs of the community, the needs are too significant for any one organization. In order to leverage the collective impact which *Siskiyou Well* can have on these health issues, a continuous, open collaboration among community organization will begin. The collaboration will allow for the development of multifaceted approaches to address health issues of many underrepresented individuals. While not all of the health issues will be addressed in the upcoming Community Health Improvement Plan, *Siskiyou Well* hopes that local community-based organizations will continue to build and support efforts in these areas.

After review of the data and prioritization criteria, the following three primary health priorities were identified and are listed in alphabetical order:

- Access to Care
- Maternal/Child Health
- Mental Health

SISKIYOU WELL
-2019-

The next step is for *Siskiyou Well* to develop a Community Health Improvement Plan (CHIP). The CHNA/CHIP process will be repeated every three years, ensuring our organizations are informed and responsive to the community's ever-changing health needs. Collaboration through this process enables our organizations to establish collective goals, minimizing duplication of efforts and maximizing our ability to positively impact the health and well being of our approximately 45,000 Siskiyou County residents.

This CHNA report was adopted by each of the key partners in June, 2019, and follows previous reports adopted independently by Fairchild Medical Center in October, 2016 and Mercy Medical Center Mt. Shasta in 2018. This report is available to the public on each key partner's website and comments, questions or requests for a paper copy can be submitted to the following:

COMMUNITY DEFINITION

Siskiyou County, California is located in the Northern-most region of California on the California-Oregon border with numerous mountain ranges dividing the county. Yreka, the largest town and the county seat, is located along the I-5 corridor along with the second largest town of Mount Shasta. Two critical access hospitals, Fairchild Medical Center in Yreka and Mercy Medical Center Mt. Shasta in Mt. Shasta, serve the county.

Siskiyou County is home to approximately 45,000 people and is a geographically large county covering 6,347 square miles, making the population density approximately seven people per square mile. As is the case for many rural counties, access to care is a consistent barrier for many residents, particularly for underserved, at-risk populations who live in geographically isolated communities.

Community Healthy Needs Assessment | 2019

7

Population Density & Demographics

The population of Siskiyou County has remained relatively consistent between the years 2010 and 2019. In 2018, Northern California was devastated by two large wildfires, the Carr Fire (Shasta and Trinity Counties) and Camp Fire (Butte County), which destroyed more than 20,000 homes. While an official count has not been conducted, Siskiyou County has experienced an increase of individuals relocating to the area as a result of these wildfires.

Siskiyou County is a sparsely populated county hosting 7.2 people per square mile, where California has approximately 256.5 people per square mile.

	SISKIYOU COUNTY	CALIFORNIA
2010 Population	43,713	37,253,937
2019 Population	45,069	39,964,848
Change in population	1356	2,710,911
Percent Change	3.1%	6.8%
Land in Square Miles	6,347	155,779
Population Density	7.2	256.5

Age Distribution

Siskiyou County has an aging population with a significantly larger percentage of the population belonging to the 65 and older age group. In Siskiyou County 25.2% of the population is 65+ compared to just 14.49% of the overall population of California. Siskiyou County gender distribution is 49.8% male and 50.2% female.

Race and Ethnicity

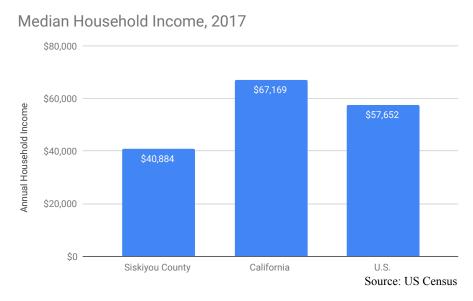

The majority of Siskiyou County residents are Caucasian, with the minority population far below state and national averages, excluding the American Indian & Alaskan Native population. Siskiyou County has an American Indian & Alaskan Native population 3.7% higher than the national average and 3.8% higher than the state average.

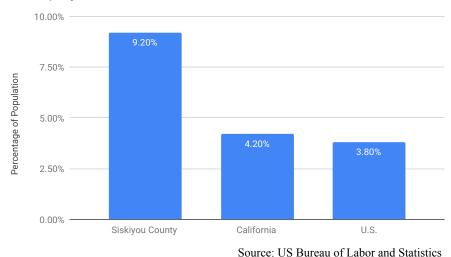

Source: Claritas 2019 and 2024 Estimates

Employment and Income

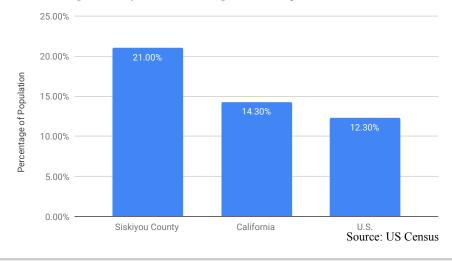

The median household income for the state of California is 64% higher than the median household income of Siskiyou County. In March 2019, Siskiyou County's unemployment rate was twice the rate of state unemployment. Poverty rates for Siskiyou County are also significantly higher than state or national rates at 21%. Poverty in the senior population is associated with poor health outcomes, including emphysema, kidney disease, loss of teeth, and liver disease. In 2019 the Federal Poverty guidelines for a family/household of two is \$16,910 per year and for a family/household of one is \$12,490 per year.

11

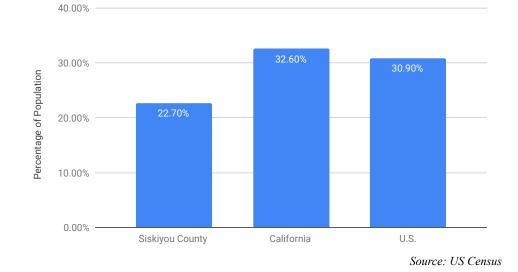

Education

Siskiyou County's high school diploma attainment rate is 6.5% higher than the state rate and 1.7% higher than the national rate. The percentage of the population with a bachelor's degree or higher is approximately 10% lower than the state and 8% lower than national rates.

Percentage of Population with High School Diploma

Percentage of Population with Bachelor's Degree or Higher

Community Needs Index

The Community Need Index (CNI) created and made publicly available by Dignity Health and Truven Health Analytics is a tool used to assess health needs. The CNI analyzes data at the zip code level on five factors known to contribute or be barriers to health care access including: income, culture/language, education, housing, and insurance coverage.

BARRIERS TO HEALTHCARE ACCESS	INDICATORS: UNDERLYING CAUSES OF HEALTH DISPARITY
Income	Percentage of households below poverty line, with head of household age 65 or more
	Percentage of families with children under 18 below poverty line
	Percentage of single female-headed families with children under 18 below poverty line
Culture/Language	Percentage of population that is minority (including Hispanic ethnicity)
	Percentage of population over age 5 that speaks English poorly or not at all
Education	Percentage of population over 25 without a high school diploma
Insurance	Percentage of population in the labor force, aged 16 or more, without employment
	Percentage of population without health insurance
Housing	Percentage of households renting their home

Scores range from 1.0 (lowest barriers) to 5.0 (highest barriers) for each factor and are then averaged to calculate a CNI score for each zip code in the county. Research has shown that communities with the highest CNI scores experience twice the rate of hospital admissions for ambulatory care sensitive conditions as those with the lowest scores.

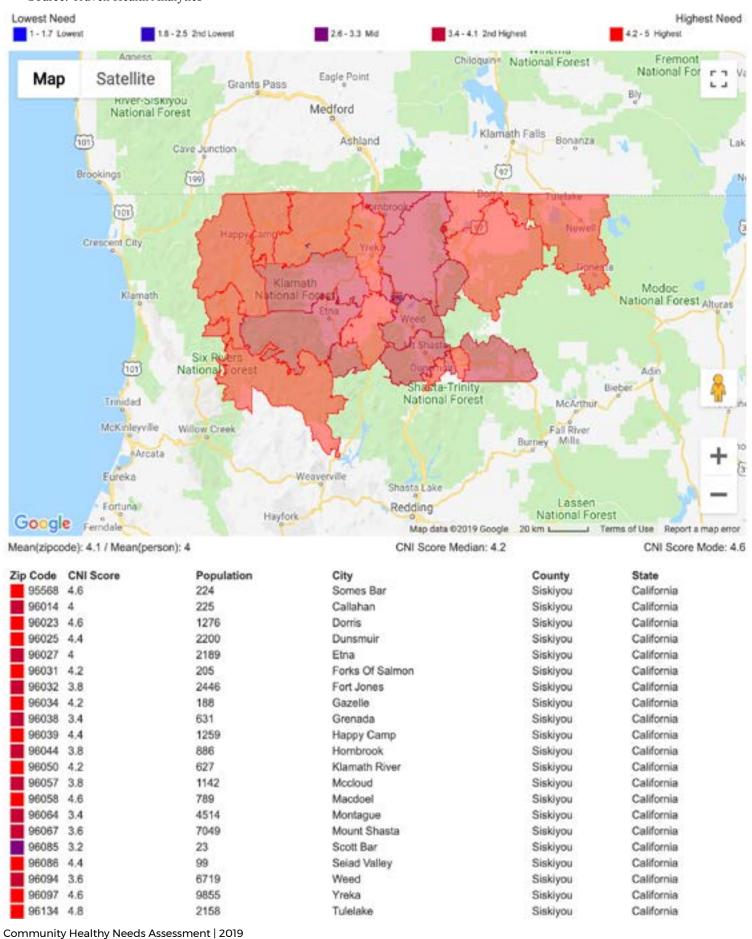

The mean CNI score of 4.2 for Siskiyou County places the county toward the high end of relative need.

ASSESSMENT PROCESS AND METHODS

Siskiyou Well is committed to creating a process centered on community engagement and collective impact. Siskiyou Well will conduct a CHNA at least every three years, building and evolving the process as the health needs of the community grow and change. By aligning hospital and Public Health efforts, the organizations will reduce duplication of efforts, allowing more resources to be dedicated to community health programs and services.

In order to be good stewards of limited organizational resources, the group opted for a mixed-method approach. To best accommodate the need of the key partners and the community, key elements from the MAPP process were utilized while ensuring the assessment remained community-based. The adapted process included four phases:

The MAPP Process

The Mobilizing for Action through Planing and Partnership process, championed by the National Association of County & City Health Officials (NACCHO), is a community-based strategic planning process for improving public health. MAPP utilizes several assessments and phases to investigate community conditions.

Phase One | Organization and Partner Development

Beginning in October 2018, the key partners held weekly meetings to design the process and define the roles of each partner. A variety of different data collection methods were explored before selecting those which maximized community engagement without becoming too burdensome for the key partners. The key partners were also careful to consider all legal guidelines hospitals and Public Health must comply with when completing the CHNA process.

By mid-January 2019, planning was complete, and the recruitment of steering committee members began. When inviting steering committee members, an effort was made to capture organizations which represent at-risk and vulnerable members of our community.

Phase Two | Visioning and Assessment Development

The first steering committee meeting was held in February 2019 at Fairchild Medical Center. During this meeting, the steering committee was given a formal introduction to the CHNA process and expectations of the months to come. A visioning session was facilitated, a name and a logo were selected for the collaboration. During the coming month several key partner meetings and one steering committee were held, questions were finalized for the community health survey and key informant survey, and the list of health indicators sourced. Numerous sources were consulted to ensure the surveys and indicators were of highest quality and relevant for our community.

Phase Three | Data Collection

Data collection began in March 2019. The community health survey was distributed electronically to outlets throughout the county, including employees of the involved organization, schools, resource centers, healthcare providers, and social media. Hard copies were made available at healthcare provider offices, resource centers, the Public Health Mobile Unit, and upon request. The survey was made available in both English and Spanish for a time period of four weeks. While an effort was made to ensure collection of responses would not target any one group or population of residents, the number of responses from those with a household income of \$50,000 per year or more was disproportionately higher than those with lower incomes and is not representative of the socioeconomic distribution of the county. For future CHNA health surveys, the key partners will review ways in which to increase the diversity of respondents.

The key informant surveys were distributed via email to 34 community leaders and decision makers. These individuals were selected by the key partners and reflect organizations from many sectors across the entire county. The key informant survey was available for ten days, in which 21 responses were collected.

The final element of data collection was a health indicators table (Appendix A). The data presented in the health indicator table represents a combination of a wide variety of data sets which were studied to obtain quantitative data about health outcomes, chronic health conditions, health behaviors, social determinants of health, and other factors in Siskiyou County. For comparison, state and national health indicator data was also collected. The most current data was sought for each measure, which ranged from 2011-2018, depending on the measure.

Data sources included:

- The Centers for Disease Control and Prevention
- California Healthcare Foundation
- United States Census Bureau
- California Department of Public Health
- Bureau of Labor and Statistics
- American Health Rankings
- County Health Rankings & Roadmaps
- Kids Data
- Kaiser Family Foundation
- CA Healthy Kids Survey
- Healthy Stores for Healthy Communities Survey
- Substance Abuse and Mental Health Services Administration
- Health Resources & Health Services Administration
- California Health Collaborative
- The National Institute on Alcohol and Alcohol Abuse
- HUD Point in Time Survey
- United States Interagency Council on Homelessness.
- The Claritas Company, © IBM Company

Data collection and parameters vary from source to source. To ensure the integrity of the data set collected, best efforts were made to compare local, state, and national statistics collected under like circumstances. Should the data not be comparable, or unavailable, the statistic will show "N/A". Data collection took place between March and April, 2019. Locating secondary data for a rural area such as Siskiyou County is often challenging. Due to the low population of Siskiyou County, statistics are often not gathered for the area or are marked as statistically unreliable. This is a common challenge for many Northern California counties. In some cases, data sets combine neighboring counties to create statistical reliability, reducing the local relevance of the data. In the event that there was no statistically reliable data for an indicator, the indicator was removed from the table. For indicators which feature combined-county data, the data is marked as such and indicates the counties which are included.

Phase Four | Prioritization and Asset Identification

Two prioritization meetings were held in April of 2019. In the first meeting, the key partners met to discuss the data collected in phase three and identify major themes to present to the steering committee. The themes identified were: Access to Care, Maternal/Child Health, Abuse and Neglect, Aging, Chronic Disease, Food and Nutrition, Reproductive Health, Mental Health, Oral Health, Drug, Alcohol, and Tobacco Abuse, Homelessness, Infectious Disease, Pain Management, and Unintentional Accidents/ Injury. The areas identified, along with all of the relevant data collected in phase three, was presented to the steering committee in the second meeting. Attendees were asked to consider the prioritization criteria, the data which was presented, and the priorities of their organization to select the top priorities. See Prioritized Description of Significant Health Needs for the results of this process. Once the health priorities were established, a list of resources in the community were identified for each priority.

Gap Analysis

Information gaps were identified through the process that may limit the ability of this CHNA to assess the entirety of the community's health needs. Gaps included limited quantitative data available at the local level for rural areas, as well as, a disproportionate percentage of survey responses from those with household incomes of \$50,000 or more.

ASSESSMENT DATA AND FINDINGS

What are the top five most important factors for a Healthy Community?

Survey Responses

- #1. Access to care
- #2. Good jobs and a healthy economy
- #3. Low crime
- #4. Healthy behaviors and lifestyle
- #5. Affordable housing

What are the top five most important health problems in the community?

Survey Responses

- #1. Mental health
- #2. Chronic illness
- #3. Affordable housing
- #4. Aging problems
- #5. Affordable foods

What are the top five most common risky behaviors in the community?

Survey Responses

- #1. Drug abuse
- #2. Alcohol abuse
- #3. Tobacco use
- #4. Poor eating habits
- #5. Lack of exercise

2019 Siskiyou Well Community Health Survey

The results of the 2019 CHNA community health survey yielded two categories of data: perceived community health issues and data on health factors and behaviors. The analysis below includes highlights from the community health survey and key informant survey related to the perceived community health issues.

Survey Result: Most Import Factors for a "Healthy Community"

Survey respondents were asked to choose from a list provided "What are the top five most important factors for a healthy community," with the option to write in a response. The top five responses were access to care, good jobs and a healthy economy, low crime, healthy behaviors and lifestyle, and affordable housing.

Survey Result: Most Important "Health Problems"

Survey respondents were asked to choose from a list of the top five most important health problems in the community. The top five responses were mental health, chronic illness, affordable housing, aging problems, and access to healthy, affordable foods.

Survey Result: Risky Behaviors

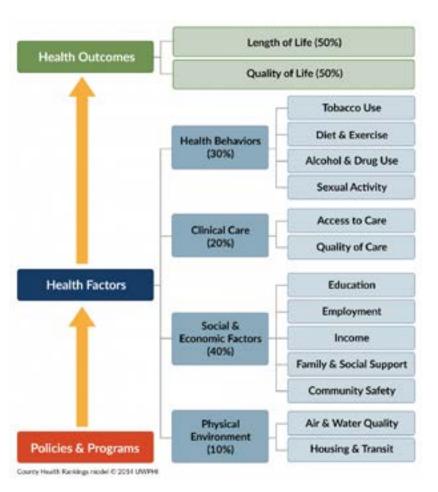

Survey respondents were asked to choose from a list of the five most common "risky behaviors" in the community. The top five responses were drug abuse, alcohol abuse, tobacco use, poor eating habits, and lack of exercise.

To view the complete 2019 Siskiyou Well Community Health Survey Results please see Appendix B

County Health Rankings

County Health Rankings & Roadmaps program is a collaboration between the Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute. The annual County Health Rankings measure vital health factors, including high school graduation rates, obesity, smoking, unemployment, access to healthy foods, the quality of air and water, income inequality, and teen births. The rankings are determined by the following factors:

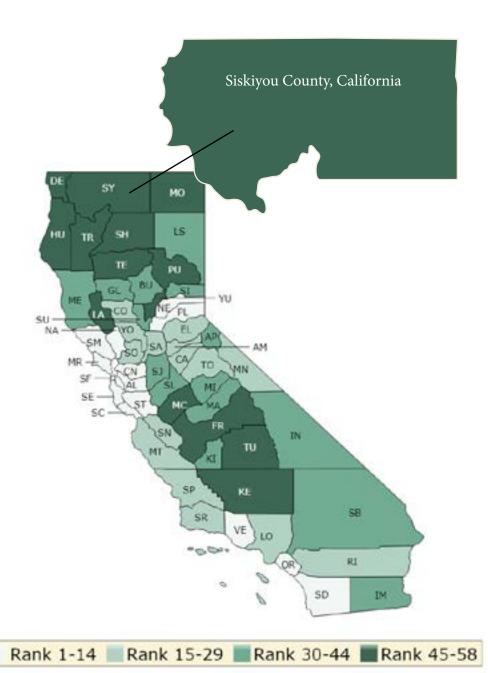

Health Outcomes: "The overall ranking in health outcomes represent how healthy a county is right now. They reflect the physical and mental well-being of residents within a community through measures representing length of life and quality of life."

Health Factors: "The overall ranking in health factors represent many things that influence how well and how long we live. Health Factors represent those things we can modify to improve the length and quality of life for residents. They are predictors of how healthy our communities can be in the future."

The Rankings are based on a model of population health that emphasizes the many factors that, if improved, can help make communities healthier places to live, learn, work and play.

Health Outcomes

Siskiyou County is ranked 57th out of 58 counties in California for overall health outcomes, which includes length of life and quality of life. Siskiyou County ranks 55th out of 58 counties for length of life and 57th out of 58 counties for quality of life.

PRIORITIZED DESCRIPTION OF SIGNIFICANT HEALTH NEEDS

After the preliminary health priorities were identified by the key partners, the steering committee was asked to prioritize the community health needs. The steering committee members were asked to identify the three health priorities that they believed to be the most significant for the community. They were asked to consider the following criteria for prioritizing the needs:

Prioritization Criteria

Magnitude/ scale of the problem

The health need affects a large number of people within the community.

Severity of the problem

The health need has serious consequences (morbidity, mortality, and/or economic burden.

• Health disparities

The health need disproportionately impacts the health status of one or more vulnerable population groups.

Community assets

The community can make a meaningful contribution to addressing the health need because of its relevant expertise and/or assets as a community and because of an organizational commitment to addressing the need.

 Ability to leverage - Opportunity to collaborate with existing community partnerships working to address the health need, or to build on current programs, and emerging opportunities.

After review of the data and prioritization criteria, the following three health priorities were identified and are listed in alphabetical order:

- Access to Care
- Maternal/Child Health
- Mental Health

PRIORITY | Access to Care

Accessing adequate health care is a challenge in rural communities across the state. Issues accessing care have been noted in all communities within Siskiyou County and in nearly all health disciplines, including primary care, specialty care, dental, and mental health. California has noted a shortage of primary care providers throughout the state. Physician recruitment and retention is especially difficult for rural areas. With rural areas payer mix being less ideal along with a smaller population to support the physician's practice, shortages are a continuous challenge. While many incentive programs exist to entice practitioners to rural areas, housing shortages and geographical isolation present additional barriers.

The following were the top concerns related to access to care:

- Access to primary care
- Access to specialists
- Insurance coverage
- Challenges in system navigation

The absence and shortages in specialty care providers force residents to seek care in neighboring counties. As noted in previous sections, transportation and travel out of the county present particular challenges. For many specialty care areas, the low population count of the county would not support the service.

Residents to Provider Ratios

	SISKIYOU COUNTY	CALIFORNIA
Primary Care Physicians*	1,497 : 1	1,341 : 1
Other Primary Care Providers**	1,218 : 1	1,770 : 1
Mental Health Providers	7,483 : 1	1,829 : 1
Dentists	1,497 : 1	1,386 : 1

^{*} Not including OB/GYN

Source: County Health Rankings & Roadmaps | 2018

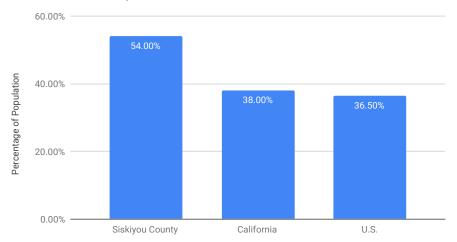

Access to dental care, particularly for the Medi-Cal population, is perhaps the most challenging. Currently, there are four dental clinics which accept Medi-Cal, three of which are located in the northern part of the county. New patients often wait upwards of one year to be seen. For children, there are no specialty pediatric dentists in Siskiyou County. Children with Medi-Cal, who need major dental work are referred outside of the county, once again with wait times for appointments upwards of one year.

^{**}Physician Assistants and Nurse Practitioners

Portion of the Population with Public Health Insurance

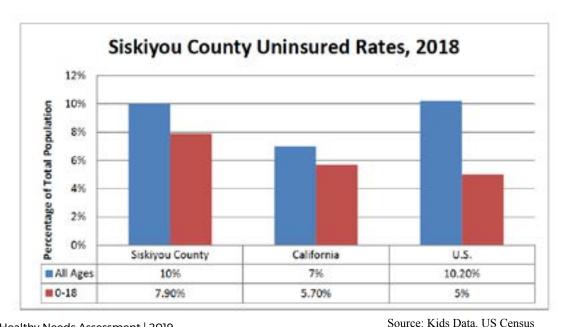

Source: American Community Survey, 2017

27% of health survey respondents said they had issues accessing the care they needed in the last 12 months, with providers not accepting their insurance as the top issue.

Accessing mental health services is also impacted by a shortage of providers, long wait times, and the distance between patient and providers. Siskiyou County Behavioral Health operates a fleet of vehicles that provide transportation services throughout the county, which reduces the burden for patients. Mental health services for those without public insurance is extremely limited and often results in residents seeking care outside of the county.

Other pertinent access to care statistics include the rate of uninsured residents:

PRIORITY | Maternal/Child Health

In a county health profile report published by the Family Health Outcomes Project in 2018, many maternal and child health issues were brought to light. Many of these statistics were used to inform the health indicators data set for this CHNA. Among the most concerning statistics were a high infant mortality rate, high domestic violence call rate, child abuse and neglect, and childhood food insecurity rate.

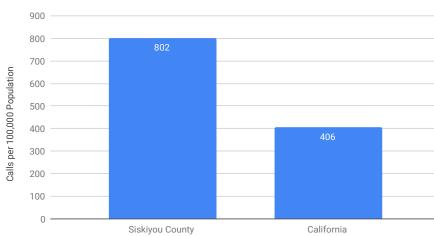

The following were the top concerns related to maternal/child health:

- Infant mortality
- Teen pregnancy and family planning
- ACEs
- Child abuse and neglect
- Childhood food insecurity

In Siskiyou County, more than 20% of adults have experienced four or more Adverse Childhood Experiences (ACEs), which include abuse, neglect, and household challenges, such as domestic violence, substance abuse, and mental illness. According to the 70/30 Project, people with six or more ACEs can die 20 years earlier than those who have none. ACEs can lead to social and emotional development impairment, adoption of health-risk behaviors, and other social problems.

The domestic violence call rate per 100,000 is double the state rate at 802/100,000 compared at 406/100,000. Siskiyou Domestic Violence & Crisis Center provides access to support, temporary shelter, and a system navigation support for those experiencing domestic violence, sexual assault, and other types of abuse.

15% of health survey respondents answered "yes" to the question "Have you witnessed/ experienced actual or threatened violence by a significant other in the last 12 months?"

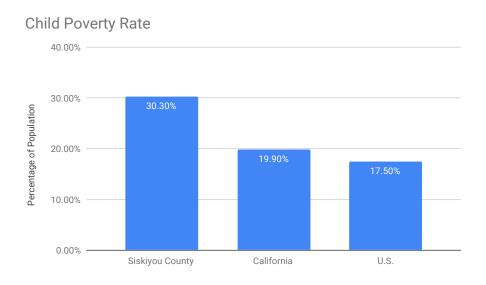

Source: Family Health Outcomes Project

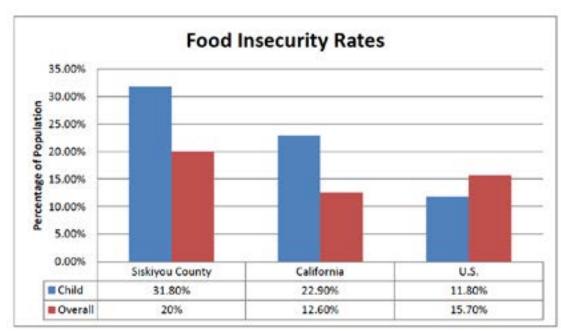

Childhood food insecurity is among the top challenges for children in the county. Siskiyou County has the second highest childhood food insecurity rate in the state at 31.8%. Childhood poverty is not far behind at 30%, the 10th highest in the state. Children who are hungry are not able to fully engage during school as they lack the energy to focus, learn, and grow. Food insecurity rates for the general population are approximately 20%.

In recent years, many initiatives have been launched to combat food insecurity and childhood food insecurity. Fairchild Medical Clinic began screening for food insecurity following their 2016 CHNA and referring to local food pantries. Great Northern Services, a non-profit organization located in Weed, has opened 9 school mini pantries which offer snacks and take home bags for students.

- Two areas in the county are located in food deserts which are 20 or more miles from a grocery store
- Approximately 6,460 individuals in the county currently receive CalFresh benefits

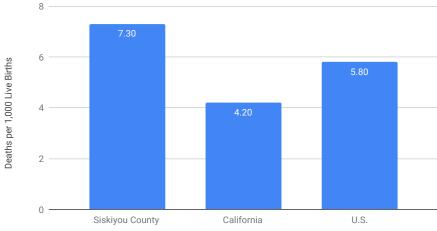

Source: Kids Data, 2017

Source: Kids Data, 2017

The infant mortality rate in Siskiyou County is 7.3 per 1,000 live births compared to 4.2 in California.

Source: Family Health Outcomes Project

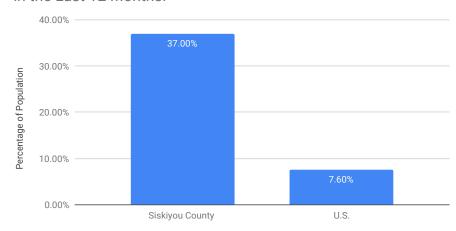

PRIORITY | Mental Health

Throughout the community health survey, key informant survey, and prioritization meetings, mental health was consistently identified as a significant health concern for the residents of Siskiyou County. Access to mental health services is extremely difficult and has many barriers to entry. A severe shortage of mental health providers leaves those in need with long wait times for appointments and lack of treatment options. With the majority of mental health and behavioral health services being located in the county seat of Yreka, transportation to appointments also presents a significant barrier for those who live in other communities within the county. Long distances through the mountainous terrain limit public transportation options, when available, and cost limits accessibility for low-income individuals.

The following were top concerns related to mental health:

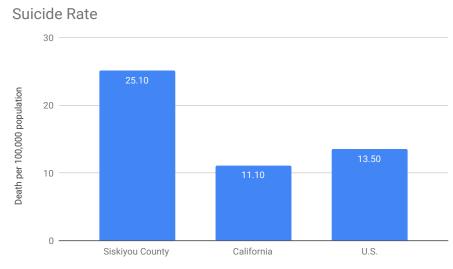

- Access to services
- Barriers to entry
- Suicide
- Mental health with a co-occurring diagnosis of substance abuse

Percent of 11th Graders Who Felt Chronically Sad or Hopeless in the Last 12 Months.

Source: California Healthy Kids Survey, 2018

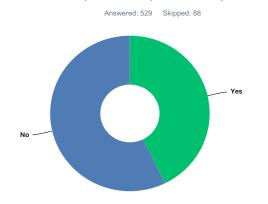

Mental health statistics for Siskiyou County raise many concerns. Five times as many 11th graders in the county report feeling chronically sad or hopeless in the last 12 months than the national average, while the suicide rate is more than twice the state rate. Depression and feelings of isolation are also among the top health concerns for the aging population of the county. Many health challenges which county residents face have been linked to increased rates of depression and poor mental health status, including lower socioeconomic status, isolation, unemployment, food insecurity, and substance abuse.

Siskiyou Well Community Health Survey

Q39 Have you had two years or more in your life when you felt depressed or sad most days, even if you felt okay sometimes?

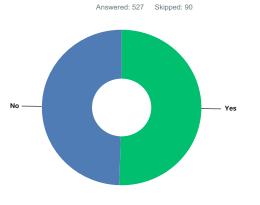

ANSWER CHOICES	RESPONSES	
Yes	42.72%	226
No	57.28%	303
TOTAL		529

Siskiyou Well Community Health Survey

Q40 Have you ever sought help from a professional for a mental or emotional problem?

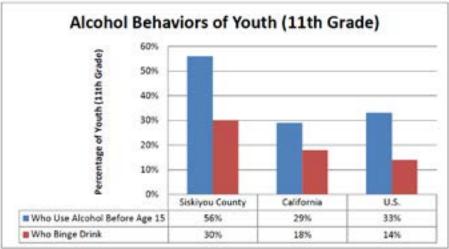

ANSWER CHOICES	RESPONSES	
Yes	50.47%	266
No	49.53%	261
TOTAL		527

Stigma related to mental health was also noted in the surveys as a top concern for county residents. According to Siskiyou County Behavioral Health Department, stigma regarding mental health and substance use disorder has been identified as a significant barrier in focus groups. Small, rural counties such as Siskiyou have increased potential for stigma, often delaying people from seeking the services they need. In the community health survey, two questions related to mental health were asked. 50% of respondents said they have sought help for a mental or emotional problem in their lifetime, and 43% stated they have experienced chronic depression.

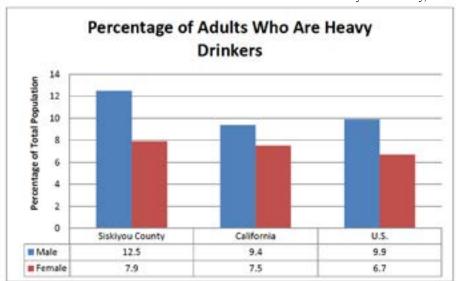

In the last several years, addressing mental health concerns has become a national focus. Funding opportunities for education, treatment, and innovative solutions are continuing to support efforts to decrease barriers to services and increase positive mental health outcomes.

"People experiencing a mental health condition may turn to alcohol or other drugs as a form of self medication to improve the mental health symptoms they experience."

Appendix A - HEALTH INDICATORS DATA

Siskiyou Well Community Health Assessment

Health Indicators Data

The data presented below represents a combination of a wide variety of data sets which were studied to obtain quantitative data about health outcomes, chronic health conditions, health behaviors, social determinants of health, and other factors in Siskiyou County. For comparison, health indicator data for State and National were also collected. The most current data was sought for each measure, which ranged from 2011-2018, depending on the measure.

Data sources include, but are not limited to: Centers for Disease Control and Prevention, California Healthcare Foundation, United States Census Bureau, California Department of Public Health, Bureau of Labor and Statistics, American Health Rankings, County Health Rankings & Roadmaps, Kids Data, Kiaser Family Foundation, CA Healthy Kinds Survey, Healthy Stores for Healthy Communities Survey, Substance Abuse and Mental Health Services Administration, Health Resources & Health Services Administration, California Health Collaborative, and the National Institute on Alcohol and Alcohol Abuse, HUD Point in Time Survey, and United States Interagency Council on Homelessness.

Data collection and parameters vary from source to source. In order to ensure the integrity of the data set collected, best efforts were made to compare local, state, and national statistics collected under like circumstances. Should the data not be comparable, or unavailable, the statistic will show "N/A".
