

Inpatient Acute Rehabilitation Outcomes

The Inpatient Acute Rehabilitation Program at Mercy General Hospital delivers compassionate, high-quality, cost-effective care that helps patients get back to the life they love. Our patients benefit from the coordinated efforts of our interdisciplinary team—offering 24/7 nursing and physician coverage. The true testament of our work is the number of lives we’ve positively impacted—helping more than 13,000 patients develop the skills needed to regain independence since opening our doors in 1986.

Who We Serve

Age range: 22–89
Average age: 62
Total patients admitted:

493

Gender: Male 296, Female 197

Effectiveness

Patients who participate in our acute rehabilitation program make significant improvements in their ability to communicate and perform self-care and mobility tasks. Compared to other area programs, Mercy General Hospital’s Acute Rehabilitation Program patients go home after a shorter length of stay with a greater ability to function in the community.

Satisfaction

87.5% of Mercy General’s Acute Rehabilitation Program participants were “very satisfied” with the overall program services and they stated they would recommend it to their friends and family.
